EVACUATION OF AIRCRAFTWas an emergency evacuation of the aircraft performed? ☒ Yes ☐ No**Method of Exit** – Describe how the occupants exited and how many occupants evacuated each location

We were upside down. I exited first though the forward door, and then un-buckled the students harness and pulled him out and helped him over to the gravel about 20 feet from the plane. I returned and grabbed the survival gear, a jacket and sleeping bag. I put the jacket on the student and wrapped him in the sleeping bag. After that i called Don Lee for help who called 911. A LifeMed helicopter arrived 15-20 minutes later. Truly impressive.

NARRATIVE HISTORY OF FLIGHT (Please type or print in ink)

Describe what occurred in chronological order, including circumstances leading to and nature of accident/incident. Describe terrain and include wreckage distribution sketch if pertinent. Attach extra sheets if needed. State time and point of departure, intended destination, and services obtained.

We took off from Talkeetna (PATK) and headed southbound for Willow (PAOU). I had the student fly along the Susitna river at 200 AGL to work on coordination and feel of the aircraft. After about 10 minutes I took control of the aircraft (Tanner) and made a left turn toward a gravel bar on the other side of the river. During the turn the nose started to drop, the plane started to sink and it sounded like we were going faster (sound of air). I added power, leveled the wings and released the back pressure in the yoke, trying to break any stall. We continued to sink and I attempted to return to level flight and as we approached the ground I added more back pressure with no response. We then hit the ground.

RECOMMENDATION (How could this accident/incident have been prevented?)
