Left wing strut bent
Broken windshield and skylight

NARRATIVE HISTORY OF FLIGHT *(Please type or print in ink)*

Describe what occurred in chronological order, including circumstances leading to and nature of accident/incident. Describe terrain and include wreckage distribution sketch if pertinent. Attach extra sheets if needed. State departure time and location, services obtained, and intended destination. Provide as much detail as possible.

Departed Wolf Lake Airport 13:15 for sightseeing and possible mountain ridge landing.
At approximately 14:45, circled strip four times examining surface and checking wind direction and velocity utilizing indicated airspeed and GPS groundspeed data. There was a quartering crosswind from the left (south) not more than 8kts. Final approach felt good, but upon landing, the plane bounced and got off the center line of the strip to the right. I thought I could recover using rudder, but was unable to get back onto the landing surface, so I tried applying full power. The plane was unable to clear the alders and contact was made, and it flipped over.

RECOMMENDATION (How could this accident/incident have been prevented?)

Operator/Owner Safety Recommendation

I think that if i was to do it again I would've added full power after the bounce and done another approach.
