Description of Damage to Aircraft and Other Property *(Use additional sheet if necessary)*

Bent propeller, vertical stabilizer and rudder damage. A few wind ribs.

NARRATIVE HISTORY OF FLIGHT *(Please type or print in ink)*

Describe what occurred in chronological order, including circumstances leading to and nature of accident/incident. Describe terrain and include wreckage distribution sketch if pertinent. Attach extra sheets if needed. State departure time and location, services obtained, and intended destination. Provide as much detail as possible.

After landing in gusty wind conditions in rough but soft terrain. I was positioning my aircraft to back taxi to the beginning of my touch down point. Upon transition I became stuck and had to apply full or near full power to become unstuck. To avoid becoming stuck again I decided to maintain a higher than normal taxi speed and power setting. While on taxi my speed became too great and I applied brakes, simultaneously hitting a large tussock. My tail came up into the air combined with excess taxi speed and gusting wind conditions, I flipped my aircraft on to its back. I had landed in the same spot previously the day before with no problems however I was near gross weight. When this occurred I was empty with only 10-15 gallons of fuel plus survival gear.

Note. ELT did not activate because I believe there was not enough impact force to activate it. The pre-flight audio alarm indicated it was working correctly.

RECOMMENDATION (How could this accident/incident have been prevented?)

Operator/Owner Safety Recommendation

1. Shut down and walk your LZ prior to taxi to identify hazardous terrain.
2. Heavy aircraft perform differently not only in the air but also on the ground.

MECHANICAL MALFUNCTION/FAILURE (If more space is needed, continue on separate sheet)Was there Mechanical Malfunction/Failure? ☐ Yes ☒ No
