I landed in Fairbanks after taking a load of fuel to Stevens Village. The airplane had 167 gallons on board according to the fuel totalizer. My next trip was to Rampart – which is approximately 25 minutes each direction. I added 20 gallons to the right wing prior to departing for a total of 187 gallons on the airplane. The weather at the time was excellent with several scattered layers at the Fairbanks airport but basically CAVU for the route of the flight and including Rampart. Winds were negligible.

I was returning to Fairbanks from Rampart after delivering ULSD and gas to the village. About 20 miles out of Fairbanks, shortly after calling approach, the engine stopped making power. I noted that the fuel totalizer said that I was going to land with 95 gallons on the airplane.

I immediately executed the engine out emergency procedure (boost pump on, igniters continuous) as per section 3 page 25 of the Air Tractor manual. Unfortunately this was unsuccessful so I lowered the nose and rocked the airplane to see if maybe the engine would restart. The engine still did not resume making power. I then proceeded with the engine out checklist and feathered the prop and shut off the fuel and airplane systems and glided to a landing in the scrub spruce about 1.5 miles north of Murphy Dome.
