NARRATIVE HISTORY OF FLIGHT (Please type or print in ink)

Describe what occurred in chronological order, including circumstances leading to and nature of accident/incident. Describe terrain and include wreckage distribution sketch if pertinent. Attach extra sheets if needed. State time and point of departure, intended destination, and services obtained.

I (with two fishing guides and four guests) left Rapids Camp Lodge (on the Naknek River, 4 miles east of PAKN) a little after 8 in the morning. After less than a hour flight, I landed at Crosswind Lake. I coordinated with the guides to return back to the plane so we can depart back for the lodge before 5 pm. Doug, the head guide, said they'd be back by 4:30 pm.

I also discussed with Doug the option of doing shuttles (half load each time) to a nearby location with unrestricted runway. I told him that i'll need his advice for the best location since i had never done that before. Doug said that he had done that numerous times and will show me the best location.

During my wait I had plenty of time to evaluate my options. The wind was strong (up to 20(?) mph) and almost straight down the takeoff direction. I also had a chance to view other beavers easily departing the same direction, (wrongly?) assuming that they were fully loaded. Some time afternoon i went around the lake with two personal GPSs in order to measure the hight of the hills at the departure path. The highest obstruction (hill) was about 50 ft above the lake but there was wide area in between the hills with a very gradual inclination.

Then, after doing calculation of length for reaching 50' and water run i didn't see a problem becoming airborne way before the 5-6 ft high bank (toward which i was aiming).

While i was reading for take off, using full length of the lake, the wing may have subsided, changed direction, and or become gustier. I remember looking at the airspeed and seeing the needle at 65 mph but i couldn't get of the water!

As I see it, I stupidly waisted time and energy on doing takeoff calculations, instead of doing the right thing which was to do two takeoffs with half load each!!!

RECOMMENDATION (How could this accident/incident have been prevented?)
