I was asked by Jerry Jacques to fly his Wilga PZL-104-80 from Willow to Talkeetna for maintenance. Although, I have approximately 10,000 hours of flight time, 200 hours flight time in Alaska, and extensive tail wheel time, I had not flown a Wilga on wheels before. In anticipation of the flight, I contacted a past owner of a Wilga in California and questioned him about the flight characteristics of the plane. I also read the Wilga flight manual in preparation for the flight.

I was told that the brakes of the aircraft were soft when it was brought to Willow so the mechanic repaired the brake system prior to my flight, which I observed. (I am also an A&P mechanic). After completing a visual inspection of the entire aircraft, the mechanic started the engine and conducted an engine power check. This required checking the braking and steering actions of the aircraft and nothing abnormal was observed.

The mechanic then turned the aircraft over to me for the flight to Talkeetna. After conducting all pre-flight checklists, I back taxied the aircraft onto Runway 13 and turned around for takeoff. No braking or steering problems with the ground operation were noted. The takeoff and flight to Talkeetna was uneventful and smooth.

Approximately 10 nm south of Talkeetna I received the airport ATIS with light winds at approximately 4 kts with landing favoring runway 36. I entered the traffic pattern on a left upwind for runway 36 in order to look over the runway and ensure suitability. After flying, crosswind, base and final for runway 36, I lined up on the centerline and touched down straight and centered. The touchdown went smoothly but the aircraft started to veer slight left of centerline so I added right rudder to correct the direction of the aircraft. The aircraft corrected right but continued to veer right despite full left rudder, entering a ground loop. As the right wheel hit the gravel on the side of the runway, the aircraft pivoted hard right, breaking the left gear and causing a prop strike.
