Description of Damage to Aircraft and Other Property *(Use additional sheet if necessary)*

Aircraft suffered substantial damage, the tail rotor assembly with vertical and horizontal stabilizers separated from the aircraft. This is most likely the result of main rotor blade "chop" of the tail cone. Main rotor gear box is mostly detached from the aircraft. The Main rotor gear box badly damaged the main fuel tank, it is unclear at this time if the fuel bladder remained intact within the tank.

No other property was damaged as the accident happened in water.

NARRATIVE HISTORY OF FLIGHT *(Please type or print in ink)*

Describe what occurred in chronological order, including circumstances leading to and nature of accident/incident. Describe terrain and include wreckage distribution sketch if pertinent. Attach extra sheets if needed. State departure time and location, services obtained, and intended destination. Provide as much detail as possible.

The mission: The intended mission was to place mineral claim corner markers. This involves maneuvering the helicopter over the GPS point where the client can drop the marker from the helicopter.

I departed the Nome airport (OME/PAOM) at 0845 AKDT on 08/03/2017 solo in VMC conditions. I picked up the client, Robert Cahoon, at his residence (about 4 miles East) as the supplies for the mission were stored there. I shut down, we briefed on the mission and loaded the markers. We had a total of 23 markers to set, we were a little over half way to completion when the accident happened.

Some of the corners are literally in water so we have to offset the placement of those markers to the nearest land mass. We were in the process of doing this when this accident happened. We were over water with a forward airspeed of about 10-20 knots. I was in the process of changing the page on the Garmin 495 located above the panel. And then my life changed at about 1032 AKDT, 30nm East of Nome airport on a 254 heading (GPS N64.33.50 W164.17.32).

In the time shortly after the accident I made statements to Bering Air's Chief Pilot, Director of Operations, the FAA, and NTSB. At that time I was thinking that I had let the tail strike the water. Having had a sleepless night to think about it; I realized that I was not maneuvering at the time. I now believe that I let the helicopter descend into the water in a more level or slight nose low attitude.

I was lower than I should have been and lost situational awareness when working with the GPS. I must have pushed forward on the cyclic as I leaned forward to the GPS unit. My first indication of a problem was the helicopter slowing and water appearing on the bubble. The helicopter quickly rolled onto its right side in about 3-4 feet of water. The impact did not feel violent to me but the rising water definitely gets a person moving quickly. I was able to release my 4 point seatbelt and soon realized we were not sinking any more.

My passenger (Robert) was in the left rear seat so he was mostly out of the water. He fought with his seatbelt a little but got it removed. We were then both standing upright with our heads outside the aircraft via the left side doors which were well above the waterline. We assessed our lack of injuries (I had a couple small cuts on my right hand) and realized we had just survived a helicopter accident. Our survival bag and satellite phone were both located under the seat Robert had been in. He retrieved them, while I attempted to secure the aircraft and check the ELT. The ELT indicator light on the panel was blinking (under water) but I pushed the manual switch anyway. I then shut off the main fuel valve and turned off the master battery switch. I called our dispatch office via the sat phone while still at the aircraft. I let our Director of Operations know what had happened, our location, and that we were uninjured.

Robert and I then got out of the helicopter and waded to shore (about 150-200 feet away). We then called our dispatch again to give them more details. Bering Air dispatched another helicopter and they had us picked up by 1200 AKDT.

RECOMMENDATION (How could this accident/incident have been prevented?)
