Description of Damage to Aircraft and Other Property *(Use additional sheet if necessary)*

Right front float strut broke. Propeller hit water while engine was running and put a slight bend in one prop blade. Left landing gear deployed with handle in up position. Other damage may have occurred during recovery from ocean, wind damage from gusts while tied to dock or damage from necessary maneuvering required to remove plane from water. Wingtip contacted ocean floor at some point and tip tank is missing. Impact damage to right wingtip from contact with ocean floor. Right wing strut bent. Right horizontal tail bent. Dent in right front float from boat impact.

NARRATIVE HISTORY OF FLIGHT *(Please type or print in ink)*

Describe what occurred in chronological order, including circumstances leading to and nature of accident/incident. Describe terrain and include wreckage distribution sketch if pertinent. Attach extra sheets if needed. State departure time and location, services obtained, and intended destination. Provide as much detail as possible.

A normal takeoff was initiated into the wind at Trident basin at 1430. The aircraft accelerated normally and got onto step. Small swells were encountered and the aircraft started losing speed. Simultaneously it began to pitch forward and full back pressure was necessary. The takeoff was aborted when it was clear that something abnormal was taking place. As we slowed the aircraft continued to pitch forward. Another larger swell was struck at a nose low attitude and the right float strut gave way. The propeller contacted the water and stopped the engine. The aircraft came to rest and all 4 occupants evacuated onto the left float. A mayday call was made at this time. We noted that the left nose gear was deployed into the water and the handle was in the up position. A skiff was launched from Trident Basin and we were able to safely return to the dock at the Basin via boat.

RECOMMENDATION (How could this accident/incident have been prevented?)

Operator/Owner Safety Recommendation

I would recommend not using vintage amphibious floats for any operation.

MECHANICAL MALFUNCTION/FAILURE (If more space is needed, continue on separate sheet)Was there Mechanical Malfunction/Failure? ☒ Yes ☐ No

(If yes, list the name of the part, manufacturer, part no., serial no., and describe the failure.)

EDO 3500 Amphibious floats Left landing gear deployed into water on takeoff run with gear handle in "up" position, and blue indicator (gear up) lights on.
