Narrative History of N4261T Flight for Matthew S. VanDeventer on January 16, 2017

Checked weather at approximately 1:30pm, called Kenai Flight Service station and requested Cold Bay and King Salmon terminal forecasts for the remainder of the day and area forecast and current weather for route.

Departed Dillingham (DLG) at approximately 1:50pm with 1 passenger (Gerda Kosbruk) bound for Port Heiden (PTH).

Approximately 2:50pm within 10 miles of Pilot Point (PIP) noticed small amount of trace ice on pilot windshield, landed PIP airport. Inspected aircraft and found no additional ice. Asked passenger if she knew anyone in PIP she can stay with or would rather go back to DLG. At which point the passenger called Grant Aviation's agent in PTH and she relayed the weather was good and I asked to speak with him. Agent reported weather was very nice with 10 miles visibility with cloud layer scattered at 3,000 feet, and stated no icing and no reports of icing throughout the day. Told passenger we will continue the flight and if we encountered more icing we would return to DLG. Passenger agreed. The weather at PIP was 10 miles visibility with cloud conditions 800ft scattered.

At approximately 3:05pm departed PIP bound for PTH.

At approximately 8 miles South of PIP began encountering trace ice again on windshield and informed passenger we were turning around and returning to PIP. Aircraft continued to pick up light structural ice with slight engine roughness, carb heat was applied and engine smoothed out, pitot heat and fuel boost pump remained on. At approximately 6 miles South of PIP began encountering severe icing at an altitude of 500ft and visibility had dropped to less than one mile. Flight controls became very sluggish, all windows were becoming ice covered, engine began surging with strong prop vibration, aircraft nose was lowered to avoid stalling, fuel selector switched. At approximately 4 miles South/Southeast of PIP the decision was made to make emergency landing. Using GPS moving map, the aircraft was put into a slight right bank to avoid open water in Ugashik Bay and turned to an easterly heading. Situation and position was broadcasted on VHF channel 18. Opened right passenger door on descend. Passenger was instructed to brace for emergency landing. Aircraft was landed on frozen river.

At approximately 3:22pm pilot and passenger exited aircraft, passenger was able to make calls on her cell phone to Gayla Hoseth in Dillingham (VanAir agent) stating situation. Gayla Hoseth then notified Dillingham Flight Service and Dillingham Alaska State Troopers reporting the incident and general location. Passenger was also able to contact her husband Mark Kosbruk in PTH before losing power. Due to the extent of my own injuries it was difficult to walk and passenger sustained injuries to her arm but was able to walk, I instructed passenger to retrieve handheld VHF marine radio from the survival bag in the front forward baggage compartment. Contact was made with unknown person from PIP on VHF channel 18 and our approximate location of 4 miles South/Southeast of PIP and in need of medevac was relayed. Individual from PIP informed us they were not picking up any ELT signal. Proceeded to rear of aircraft to access ELT, I removed the ELT from bracket and moved the selector switch from armed to on position, I then had passenger confirm the ELT was in the on position. At this point I could no longer walk due to back injuries and passenger was unable to climb back into the aircraft to operate radios due to injuries. I then asked passenger to go to the left side of aircraft and reach through the broken plexi glass and I instructed her on how to turn on master switch and strobe lights for when search aircraft was spotted in the area.

Passenger then returned to rear of aircraft where we used the engine blanket to stay warm and await rescue.

At approximately 6:30pm the US Coast Guard MH-60 Jawhawk helicopter was able to successfully rescue passenger and pilot.
