Accident Report
Monday, October 30, 2017

Departed from KGV L at approximately 8:00 am RNY 29 bound for Gary, Indiana KGY Y . Plane had been fully fueled and pre-flighted both in hangar and again after fueling. Initiated climb from airport. Opened flight plan with ATC and continued climb to 10,000 feet. At approximately 6,000 feet I transferred to a new frequency, 133.1. Continued climbing and at approximately 8,000 feet noticed engine sound similar to overspeed. Immediately put my hand on the throttle and manifold levers. Visually checked instruments and first noticed oil pressure light and then oil pressure was at zero. Reduced throttle to zero. Engine at idle speed at this point. Immediately declared an emergency with the controller: engine out and no oil pressure. Asked for heading to nearest airport. Controller gave heading and I inquired as to what airport. Controller responded, Cherokee County, 16 miles. I immediately informed controller that there was a race track underneath me and that I only had about 8 miles of glide (no way possible to make it to Cherokee County. I did not want to risk injury to people on the ground by landing on the highway or any other possible location and the race track appeared to be deserted and directly under me. I adjusted flaps for glide and started a circle and descent to the race track. At approximately 6,000 feet, I heard a bang, smoke exited from the front of the engine cowl, through the oil filler door, and entered the cockpit. I immediately notified the controller again that I was declaring an emergency and that I had smoke in the cockpit. At this point, I turned the heat off and opened up all vents to clear all smoke from the plane. Now the engine is violently jerking as though a propeller blade were out of balance or missing. I continued my descent at approximately 3,500 feet and noticed a white truck at the end of the building next to the straight away that I intended to land on. My thought was that ATC had notified someone on the ground and that they were on the ground to assist me. At this point, I am making my downwind approach to land. I brought the engine full throttle to see if I could get any power from the engine. It was at this point that the engine quit running all together. As I made my turn to come in and land, altitude and air speed were perfect for landing on this strip of asphalt. However, the white truck was now in the middle of my "landing strip." As I continued losing air speed and descending, I realized that I would either hit the white truck, the building on the left, or the bank to the right. I banked the plane hard to the right to avoid hitting the truck and the gentleman on the ground by the truck and crashed into the bank on the right hand side of the asphalt. I do not remember getting out of the plane or anything else until EMS was assisting me.

RECOMMENDATION (How could this accident/incident have been prevented?)

Operator/Owner Safety Recommendation

Unknown, But the controller could have been far more helpful. He could have actually recognized I had an emergency (I declared one twice) and given me the nearest field (Elliott Field) I think its 30 GA which come to find out was only two miles from me in and in my glide distance. He could have cleared the channel and given me his attention instead of providing distractions. He could have NOT troubled me by asking for multiple phone numbers. Honestly who knows anyones number anymore. EVERY controller should have to ride in a plane and experience a simulated engine out and realize the short window of time to fly the plane. I had 8 miles of glide and five or less minutes to navigate and make decisions. The less chatter with a unhelpful controller the better. I watch and listen to the safety videos on aopa and other sites monthly. EMERGENCY always gets more respect and attention on the tape than it did for me.
