Departed KMAI at approximately 10:45 am central time. 2 Souls on board. Intended to fly to KFFC to meet friends for lunch. Requested flight following from Cairns airfield and received it for a short time but was canceled and instructed to squawk vfr and contact Atlanta center when in range. Continued flight along route for 10 to 15 minutes and monitored weather via ipad, and nearby asos/awos radio frequencies ahead on route. Weather enroute appeared to have a pocket of IMC ahead and was unable to raise flight services on com, so decided to turn back to KEUF to land, and use wi-fi to check weather, and restrooms. Proceeded to turn to a West-Southwest course to KEUF and as soon as turn was completed, the failure occurred. Aircraft began to shake violently, as if out of balance. I immediately turned off magnetos, and pulled mixture to stop engine. I quickly assessed that I still had controlled flight and noticed that my right rudder skin was damaged with parts missing. I could not view the propeller at that time. I Transmitted mayday on guard 121.5, and reported my emergency. Checked distance to KEUF and it was 9.2 miles. I had begun a slight decent so I can estimate my altitude to be between 6800 and 7000 feet at the occurrence of the incident. I believed my glide ratio was conservatively sufficient to make the airport at this altitude. Normal flight returned when engine stopped and I maintained best glide to the airport. I Reported airport in sight on 121.5 and stated that I believed I could make it to the airport property. Approach and descent was near normal, but winds were gusting to 17Kt directly behind me so my landing was downwind. Still normal approach, until approximately 5 seconds before touchdown. Winds became gusty on the downwind, dead stick landing and I had to input more and more control to keep wings level before touch down. Airspeed diminished quickly and lost altitude suddenly near touchdown and we had a hard landing. Landing was equal and level on the main gear, but hard, and the gear bow broke away to cushion impact as designed. Shortly after the main gear, the front retractable gear collapsed. The aircraft slid to a stop on it's belly in the grass. I immediately jumped out to check on my passenger. Law enforcement arrived within seconds of touchdown, and we were not injured. I was unable to use radio to contact 121.5, or answer any inquiries because my com antenna was under aircraft and broken off. Upon landing and viewing the propeller it was clear that there was a portion of the propeller that was resting in the upward 2 o'clock position that was not at the crash site. The lower approximately 8 inch portion of the propeller that was resting in the 8 o'clock position had broken off at landing and was present with the other debris.
