Re: November 2017 Aircraft Accident

Dear Mr. Williams:

I am in receipt of your communications regarding the unfortunate aviation incident that took place in November of 2017.

You have indicated that the aircraft's hand-carved wooden propeller failed while the aircraft was in flight, resulting in a forced landing/crash. You have also indicated that the propeller was reportedly manufactured from a lamination of hard maple lumber, using DAP's Weldwood Plastic Resin Glue.

As you have correctly concluded, DAP Plastic Resin Glue is designed as a wood glue for craftsman, artisans and hobbyists working on applications and projects such as cabinetry and furniture.

DAP has not qualified this product for use on any aircraft component such as hand-carved wooden propeller, nor has it been tested for applications where extreme temperature fluctuations, pressure and vibration would be expected.

Please do not hesitate to contact me should you have any questions or concerns.

Sincerely,

Neema Toolaabee
