NARRATIVE HISTORY OF FLIGHT (Please type or print in ink)

Describe what occurred in chronological order, including circumstances leading to and nature of accident/incident. Describe terrain and include wreckage distribution sketch if pertinent. Attach extra sheets if needed. State departure time and location, services obtained, and intended destination. Provide as much detail as possible.

Everything seeing Normal for a night flight; while I was practicing approaches on Wednesday night around 8:pm. One dot below glide slope before reaching my final approach fix for ILS Rwy 9L, I performed the prelanding checklist. I made sure the landing gear was down, and I verified with the green position light. My safety pilot also confirmed the landing checklist with me. Before reaching Zolita around 500 ft. The GPS flickered, and immediately we lost all entire electrical system. The low-voltage light did not illuminate during the flight. My safety pilot entered 7600 on the transponder. The steady green light from the tower gun signal cleared us to land. Around 200 feet before touchdown, some lights inside the cockpit came on. while my safety pilot tried to communicate with the tower, I turned on the landing light. As soon as I turned on the landing light, we lost all electricity again. After touchdown, we realized that the main gears were not locked in place. The airplane drifted to the right and stopped off the runway in the grass.

RECOMMENDATION (How could this accident/incident have been prevented?)

Operator/Owner Safety Recommendation

This accident was very difficult to prevent because the low-voltage light did not illuminate during the flight. We were not able to see the alternator malfunction during the flight. It was at night and without any electrical power a go around was not an option that we considered safe. In addition we were completely sure about the landing gear position since we were able to confirm with the green gear position light.
