Description of Damage to Aircraft and Other Property *(Use additional sheet if necessary)*

Both wings and the fuselage were heavily damaged. Went through completely one barbwire fencing and damaged another.

NARRATIVE HISTORY OF FLIGHT *(Please type or print in ink)*

Describe what occurred in chronological order, including circumstances leading to and nature of accident/incident. Describe terrain and include wreckage distribution sketch if pertinent. Attach extra sheets if needed. State departure time and location, services obtained, and intended destination. Provide as much detail as possible.

We departed McComb KMCB approximately 2:05 pm CST headed to Bobby Chain Airport KHBG in South Hattiesburg, MS. We were down on the ground by 2:55 pm approximately 2 miles south of Highway 98 near Purvis, MS close to Purvis-Oloh, Road.

We were flying at 3500 feet. I had power at about 85% and mixture leaned out just a bit. EGT temperatures were normal. I was south of 98 about 11 miles from Bobby Chain, between Columbia and said airport when instantaneously the engine went from producing power to making a very rapid, metallic banging/clanging noise and an instant loss of RPM's. Immediately I pulled carb heat on and continued checking oil pressure, oil temperature and engine temperatures, which were all in the green.

The engine was creating a violent shaking of the entire plane. After approximately 20 seconds, I realized that carb heat was not helping. I immediately went mixture-rich and started playing with the throttle to see if I could get more power. The more power I gave it, the more violent the shaking got and it seemed like the less RPM's I got. I realized that the power that the engine was producing at this point was not sufficient to hold altitude. I reduced power and the shaking reduced, but never stopped.

I assessed our location, distance from the airport and determined that I could not glide as far as Bobby Chain Airfield. I considered turning back and heading towards Columbia airport, but realized I was actually farther from Columbia the Bobby Chain. I determined that I could not make either airport, and considered my options. When considering the much more densely-populated area near Bobby Chain airport versus my current location and the possibility of having to down in that area, I elected to pick one of the fields below me.

At this point, the engine was just above idle, but still not producing sufficient power to hold existing altitude or assist in gliding into an airport. I made wide, slow turns while I decided which field I was going to choose, holding as much altitude as possible. After I chose the field that looked the most well-cut and flat, I steepened my turn as in an emergency landing situation. Once I had gotten low and had committed to the field, I realized there were big transmission lines cutting across at the approach end of the field. There were also power lines cutting across toward the end of the field that I had noticed earlier, but deemed no threat, because I felt I would have been down by then. I had to stay high over the transmission lines and once I cleared them, I slipped the plane down to lose as much altitude as quickly as possible. This slip got us on the ground faster, but also increased our airspeed.

Once on the ground, in the damp grass, I put as much weight on the wheels as possible and tried to brake, quickly realizing I was too fast and was not going to stop by the end of the field. At the end of the field I saw nothing but trees except for a small drive-way sized opening. Using what rudder authority I had left, I turned the plane to the right, placing fuselage into the opening. My training has taught me that letting trees hit the wings rather than the fuselage in an emergency landing situation such as this, would greater our chances of survival. As we skidded towards the tree line, we went through a small barbed-wire fence and quickly after, the right wing struck a tree out towards the end of the wing, turning the plane 90 degrees to the right. The left wing dug into the ground, stopping us from moving. The nose wheel was folded up and we came to rest on the nose and the left main landing gear, with the tail up in the air.

I quickly turned off all electrical equipment and the magnetos, asking if everyone was okay. All passengers confirmed they were okay. I exited the plane first because the pilot-side door was open and pointed towards the ground. Then I moved my seat up, let my passenger in the rear out of the airplane, and then pulled my seat back and let the front right-seat passenger out of the plane. Passengers by had already stopped and called emergency crews to the location.
