NARRATIVE HISTORY OF FLIGHT *(Please type or print in ink)*

Describe what occurred in chronological order, including circumstances leading to and nature of accident/incident. Describe terrain and include wreckage distribution sketch if pertinent. Attach extra sheets if needed. State departure time and location, services obtained, and intended destination. Provide as much detail as possible.

I was conducting a commercial multi-engine test prep flight with Mike Spinazzola. We departed our home base airport KDKX at 1400 (EST) after obtaining fuel. We intended to practice a number of maneuvers to prepare Mr. Spinazzola for his commercial multi-engine check ride. Mike sat in the left seat. I sat in the right seat. Gerald (Jerry) Marotta, who is also a CFI with an airplane MEL rating, was in the rear seat observing. Jerry and I were scheduled to fly next in preparation for his Multi-Engine Instructor check ride

We completed a series of maneuvers to prepare Mike for his check ride the coming Saturday. We returned to Knoxville Downtown Island Airport flying the LOC26 Approach. I simulated an engine failure outside of the Rizen intersection by retarding the left engine to 12" of manifold pressure.

Mike flew the approach to the missed approach point and broke off the approach and circled left to land with the left engine still set to 12" manifold pressure. Mike's turn to circle was too close to the approach end of RWY 26 so he was too high on the approach to land. He put in full flaps and reduced the right engine to idle to attempt to land and began to descend rapidly. We were too high to accomplish a landing and crossed the approach end of RWY 26 at approximately 500 ft AGL. I called for a go around. Mike agreed and immediately applied full power to the right engine attempting to fly the pattern with the simulated left engine failure. Shortly after initiating the go around and making the left turn, Mike said he had lost the left engine. I looked and saw that the left prop was stationary.

I said "I have the flight controls" and took control of the airplane. Mike relinquished control. I checked throttles, props and mixture full forward and I attempted to retract the flaps with no effect. The gear and flaps on the Aztec are hydraulic and the only pump is on the left engine. Without that engine running, we could not retract either the flaps or gear unless we hand pumped them up which requires approximately 50-65 strokes to retract both. In my judgment, our best option was to attempt to restart the engine. The starter switch is located to the left of the left seat and inaccessible from the right seat, which I was occupying. I asked Mike to try to restart the left engine while I concentrated on flying the airplane. We were approaching terrain and losing altitude. Lowering the nose to increase airspeed to Vyse with gear and flaps deployed and the prop unfeathered would have caused us to rapidly lose altitude and impact terrain. With engine RPM below 1000, the prop cannot be feathered. I held the airspeed above Vmc(SE) (80 mph) banking slightly into the right engine. We could not turn to the left due to terrain. I continued to focus on flying the airplane and avoiding terrain and asked Mike to try restart the engine to get the flaps and gear up. Mike made several attempts to restart the left engine without success. We were unable to restart the engine and we were unable to climb. I made a wide sweeping right turn to remain clear of terrain. and made a radio call that we were returning to KDKX having lost one engine and would land on runway 8.

The shallow banks required to maintain control prevented us from completing the 180 degree turn necessary to align with the runway and we crossed the extended runway centerline unable to complete the turn and return to KDKX before encountering rising terrain. We continued to lose altitude and were approaching a residential area. Our best option was to aim for trees, which I did. I aligned the plane with a stand of trees and then saw a house in our path. I banked right slightly to avoid the house. We impacted trees coming to an abrupt stop and then dropping straight down onto a car in a driveway.

We exited the airplane and I saw that Mike's eye was injured and Jerry's leg was injured. I took off my shirt and gave it to Mike to place on his eye to stop the bleeding. I asked the homeowner for ice, and he brought several plastic bags. I put the ice bag in the shirt that Mike had on his eye. A resident asked me to "shut off the battery". I made certain that everyone was safe outside of the plane. I re-entered the airplane and shut off the master switch. I went to shut off the fuel selectors also but found the left engine fuel selector set between the inboard tank "on" position (rear) and off position (center). I placed it in the full off position. I could not reach the right fuel selector as it was blocked by other aircraft structures.

After the accident I discovered the following accident report: DEN82DA080 and airworthiness directive: AD-80-18-10 applicable to the fuel selectors in PA-23-250 aircraft. I have not been able to access the logbooks to confirm that the aircraft was in compliance with this AD.

I HEREBY CERTIFY THAT THE ABOVE INFORMATION IS COMPLETE AND ACCURATE TO THE BEST OF MY KNOWLEDGE
