Aircraft Damage ☐ None ☒ Substantial ☐ Minor ☐ Destroyed ☐ ☐ Unknown	Aircraft Fire ☒ None ☐ Both Ground and In-Flight ☐ In-Flight ☐ Fire at Unknown Time ☐ On-Ground ☐ Unknown	Aircraft Explosion ☒ None ☐ Both Ground and In-Flight ☐ In-Flight ☐ Explosion at Unknown Time ☐ On-Ground ☐ Unknown	Description of Damage to Aircraft and Other Property <i>(Use additional sheet if necessary)</i> The aircraft cart wheeled upon landing. I saw some photos of the damage, but have not personally seen the aircraft since the accident.		
NARRATIVE HISTORY OF FLIGHT <i>(Please type or print in ink)</i>					
Describe what occurred in chronological order, including circumstances leading to and nature of accident/incident. Describe terrain and include wreckage distribution sketch if pertinent. Attach extra sheets if needed. State departure time and location, services obtained, and intended destination. Provide as much detail as possible.					
The day prior to the accident, I had just purchased this aircraft and was at Calvada airport in Pahrump, NV, to get training and familiar with this aircraft prior to my taking it back to Lake Havasu City, AZ. That day I received 1 hour of dual instruction (several Touch & Go's) in this aircraft with myself as Pilot in command. It should be noted that I had 29 hours in this type of aircraft.					
The follow morning I received another 1/2 hour of dual instruction/training prior to my solo flight. This was a clear no wind morning with unlimited visibility. I was familiar with this airport as I received my Sport Pilot License here in May of 2017. I took solo control of the aircraft and proceeded with a non eventful takeoff on runway 15. I performed a single touch and go during this take off as I had plenty of runway.					
I announced and made a standard left hand turn to a down wind to prepare for a landing on runway 15. I announced and executed a base to final. When approaching to land I was a little slow so I flared, but hit hard on the runway. I then felt and saw myself in the air and accelerating so I applied more throttle to gain altitude for a go around. As I gained altitude, I realized that the aircraft was hard to control and wanted to turn hard left. I gained control of the aircraft and then looked to see if I could see and damage with the wing, frame or landing gear. I did not see any damage. I then initiated an left hand turn to line myself up for a down wind to base for runway 15. During this turn the aircraft went into a violent left turn that I had a hard time controlling.					
After slowly setting myself up for a landing I proceeded to attempt another landing. When coming in the aircraft pulled left to the point that I could not land it. I made 3 or 4 more attempted landings finding the aircraft would pull left every time. And on every go around the aircraft would violently pull left as I would make a maneuver into a left turn to down wind.					
Because the aircraft was extremely difficult to control and I was getting physically fatigued, I decided it was best to get the aircraft on the ground rather than take the chance the I might have an uncontrolled crash at 1000 or more feet. So on the next landing attempt I decided that I would put the aircraft on the ground even if it meant a hard landing.					
I announced and set myself up for a landing lining myself up o the far right side of the runway. the aircraft continued to pull left as I set up my landing. As I touched down, I felt the aircraft accelerate. As this happened, I was determined to keep the aircraft on the ground pulling back hard on the control bar to keep the nose of the aircraft down.					
The next thing I saw was the sky and then the ground, as the aircraft handcart wheeled. When the aircraft came to a stop, I evaluated my self discovering that I had broken my arm and possible my ankle. I saw that my foot was caught on something and I could not move it. When help came, I instructed them to get my foot lose then help me release the seatbelt so I could exit the aircraft. I was helped to the side of the runway where I waited for the Paramedics to stabilize me.					

RECOMMENDATION (How could this accident/incident have been prevented?)

Operator/Owner Safety Recommendation

Since the accident I was told that the first hard landing attempt probably caused a motor mount or ?? to break loose. (The aircraft is approximately 150 miles from where I am heading, and I have not received any official word as to what did or did not break) This evidently caused the accelerator to in-gauge and applied power as the aircraft touched down. I had no way of knowing this until after the accident, but in hind site I could have turned off the Magnetos and come in on a non-powered landing which would have eliminated the aircraft from accelerating upon touch down. Because this type of aircraft utilizes a foot throttle, I think it would be beneficial to have a device that would isolate the foot throttle from a direct link to the carburetor. This would have prevented the accident from happening.
