- ☒ None ☐ Both Ground and In-Flight
☐ In-Flight ☐ Fire at Unknown Time
☐ On-Ground ☐ Unknown

Aircraft Explosion

- ☒ None ☐ Both Ground and In-Flight
☐ In-Flight ☐ Explosion at Unknown Time
☐ On-Ground ☐ Unknown

Description of Damage to Aircraft and Other Property *(Use additional sheet if necessary)*

No damage other than blade strike separating empennage from tail section, damage occurred after landing and was due to the unstable landing surface.

NARRATIVE HISTORY OF FLIGHT *(Please type or print in ink)*

Describe what occurred in chronological order, including circumstances leading to and nature of accident/incident. Describe terrain and include wreckage distribution sketch if pertinent. Attach extra sheets if needed. State departure time and location, services obtained, and intended destination. Provide as much detail as possible.

On July 29th, 2018 at approximately 8:00am, I add 5 usg of 100LL from a jerry jug, sump fuel tanks and gascolator, perform a preflight inspection and reposition heli from Bettles ramp to National Park Service fuel pump, refuel full and reposition back to ramp. The engine run time including warm up and cool down after using the jerry jug is about 15-20 minutes. The jerry jug used had been filled by me from the NPS source and in my possession until used, a Mister Funnel filter was used during refueling from the jug.

From 8:45 - 9:00 I perform a complete preflight inspection and load the heli.

9:04am start-up in VFR conditions (from automated service), 18,000' ceiling, unlimited vis, 15°C, 30.10in/hg, light wind from the north

9:08 am liftoff with full fuel, two passengers and their gear, slightly under max gross weight.

I depart Bettles Rwy 20 on course heading 202° magnetic and start a slow climb to clear the low hills to the SSW. The engine stops without warning 3-4 minutes later at about 450'-550' AGL. I enter an autorotation and glide to scene without incident. The landing site terrain is an unstable bog covered with a floating mat of tussocks. After touchdown, the helicopter sinks through the mat and pitches forward, the main rotor blade contacts the tail cone and cuts the empennage off which comes to rest beside the fuselage. Several other parts are scattered within a two hundred foot radius.

Neither passengers or myself are visibly injured and both verbally confirm so. In the hours following the accident we all appear to behave as normal.

Passengers cleared a tree covered spot for the inbound heli to land. The ELT did not activate, since we are already in contact with an assisting helicopter, I elect to leave it off.

I contact Quicksilver Air DoO Rick Swisher and report the landing.

Both passengers and myself are returned to Bettles within two hours.

RECOMMENDATION (How could this accident/incident have been prevented?)

Operator/Owner Safety Recommendation

INTENTIONALLY LEFT BLANK

MECHANICAL MALFUNCTION/FAILURE (If more space is needed, continue on separate sheet)

Was there Mechanical Malfunction/Failure? ☐ Yes ☐ No
(If yes, list the name of the part, manufacturer, part no., serial no., and describe the failure.)
