NARRATIVE HISTORY OF FLIGHT (Please type or print in ink)

Describe what occurred in chronological order, including circumstances leading to and nature of accident/incident. Describe terrain and include wreckage distribution sketch if pertinent. Attach extra sheets if needed. State time and point of departure, intended destination, and services obtained.

Pilot took off Runway 26, in LH downwind reported loss of engine power, turned to land on Runway 36. Later stated he switched on boost pump to change Fuel tank Selector, but held boost pump on.

Aircraft landed 1/2 mile short of Runway 36 in soft, swampy tundra. Aircraft was lifted by helicopter to Iliamna Airport. Retrieval person Kevin Wyckoff, IATo Don Charles Morey, and myself Tim LaPorte verified there was fuel (10cc) in the wing tanks, Header tanks, fuel screen, & fuel injection lines. A compression check showed 1 cylinder with 50-7/80 and 1 cylinder with 0 compression. We did however, with the bent propeller still on, start and

RECOMMENDATION (How could this accident/incident have been prevented?)

Operator/Owner Safety Recommendation

run the engine as installed. It shook very bad - but did run & make power.

It is my - Tim LaPorte - opinion that by holding the boost pump on the engine was flooded with fuel and could not produce power & keep running. I believe a later engine teardown at Continental Motors indicated a large hole in one of the engine pistons.

This is how I remember the incident.
