Description of Damage to Aircraft and Other Property *(Use additional sheet if necessary)*

Damage to propeller, engine, cowling (minor), engine mounts and nose landing gear, firewall, lower fuselage skin just aft of firewall, left main gear and all 3 gear wheel fairings.

NARRATIVE HISTORY OF FLIGHT *(Please type or print in ink)*

Describe what occurred in chronological order, including circumstances leading to and nature of accident/incident. Describe terrain and include wreckage distribution sketch if pertinent. Attach extra sheets if needed. State departure time and location, services obtained, and intended destination. Provide as much detail as possible.

Cross country flight from PAKT to PAJN, cruise at 3,000 ft with 65% power (23-23). Observed EGT increased, 1355F to 1375F, and found RPM high, almost 2400 rpm. Other gauge indications were normal. I was watching the RPM gauge when moving the prop control to reduce RPM and immediately the RPM increased passed redline to 3100 RPM. Redline is 2700 RPM. I immediately cycled prop control with no affect then reduce throttle control bringing RPM under 2000, then advanced to 2600 RPM for stable flight. Scanned instruments and others were normal. Speed decreased from 135 KIAS to 105 KIAS. Decided to change destination to PAWG (Wrangell, AK) as it was the closest airport. Roughly a minute later, the oil pressure decreased followed by oil covering the windshield, continued flight navigating from the side windows. Declared emergency on 122.9 and message was relayed to PAKT FSS (2 way communication with other aircraft in the area). Landed on Etolin Island near Kelp Point. Landing was fairly smooth considering landing on a beach, no injuries. ELT did not go off. Touched down and slowed down. Failed to stop before nose went over bank, both mains stopped short of the bank. Turned off electrical power when stopped. Sent message via InReach to notify family of situation and they contacted FSS. Then departed aircraft via front left door.

RECOMMENDATION (How could this accident/incident have been prevented?)

Operator/Owner Safety Recommendation

No change to the flight operations. Issue was internal to the engine which passed the previous annual. Oil filter was not cut open to inspect for metal debris, this would have been a proactive step, but I suspect it would not have prevented this incident.

MECHANICAL MALFUNCTION/FAILURE (If more space is needed, continue on separate sheet)Was there Mechanical Malfunction/Failure? ☒ Yes ☐ No
