Description of Damage to Aircraft and Other Property (Use additional sheet if necessary)

- Left landing gear bent (folded up underneath aircraft)
- Left wingtip strike (NTSB investigator identified damage to spar)
- Prop bent, damage to firewall forward from nose strike
- Tail wheel bent

NARRATIVE HISTORY OF FLIGHT (Please type or print in ink)

Describe what occurred in chronological order, including circumstances leading to and nature of accident/incident. Describe terrain and include wreckage distribution sketch if pertinent. Attach extra sheets if needed. State departure time and and location, services obtained, and intended destination. Provide as much detail as possible.

I departed DL66 to upper Salcha river area when getting into the Mountain terrain and flying around looking at the Scenery and caribou on the ridge and mountains, I powered up full throttle to climb over top of one mountain and as I descended into the next valley pulling power back the motor began to cough/run rough I went full power and it was like it was starving for fuel and then stopped. I pulled carb heat on switch tanks, switched back to left tank again and the motor acted like it was running. I was focused on everything at once trying to get the airplane to run and pinpoint my landing spot on a small ridge top, leading up hill into the mountains. Not ever been in this situation before I focused on landing the plane because things were happening so fast. As I thought the motor was running rough it didn't have power. I attempted to start the plane by switching tanks again but realized that I just needed to focus on landing and not overshoot my one chance to land. (I didn't want the motor to fire off and quit making me miss the ridge top) I did land pulling in full flaps the terrain was rock covered. I dropped my as to not float and have control keeping me on the ground I must have caught a rock on the left landing gear bending it and causing my prop to strike the ground and the left wing tip stopping the plane.

RECOMMENDATION (How could this accident/incident have been prevented?)

Operator/Owner Safety Recommendation

I'm not sure how to write this...

But as for^{as} people like myself it would be a great help to Practice Engine out procedures more often at a airport or area that would allow you to land safely when engine is at idle... Also It would benfit to Get more training in when to commit to your landing location so that you aren't Second guessing yourself (what ifs) Landing in off airport situations is not for everyone but it's what lots of Alaskans do So maybe more off airport training.
