NARRATIVE HISTORY OF FLIGHT *(Please type or print in ink)*

Describe what occurred in chronological order, including circumstances leading to and nature of accident/incident. Describe terrain and include wreckage distribution sketch if pertinent. Attach extra sheets if needed. State departure time and location, services obtained, and intended destination. Provide as much detail as possible.

On the morning of July 19th, 2019 I arrived at Tutka Bay Lodge at approximately 0955AM Local (AKDT). I slowly pulled into the beach just to the left of the pier. Gus, lodge employee, was there in his waders to catch the plane. He was also teaching another younger guy how to receive the airplane there. I tried to make it easier by steering away from them but they got in front and caught the airplane just fine anyway. I pulled the water rudders up, and stepped out onto the left float to greet everyone. My passengers were a family of six: father, mother, three younger sons and an older cousin. I handed a few boxes to them, and we soon began loading the passenger bags.

Once the bags were loaded I put a cargo net up, and stepped out on the float again. The passengers were ready to board. First up was a blonde boy who seemed in his mid teens, I informed him to take the copilot seat. Next was a slightly older boy who took the far right position on the three person bench seat. Two younger boys followed and I had them take the two rear folding seats. Then the father greeted me as he boarded the aircraft, shook my hand and introduced himself. He sat in the center position of the bench seat. Lastly the mother boarded, sitting in the far left position on the bench seat. As she did, she gave many thanks to the lodge staff, and specifically told them how the kids thought everyone was so cool. They seemed really pleased with their trip. The lodge staff pulled the walking plank but I needed to use the restroom and asked them to place it back. I did that, and then boarded the aircraft and waved goodbye to the staff.

Once in my seat, I wrote down the departure time of 1005. I turned to the folks and asked them to remove their headsets so that I could give them a safety briefing. I did my normal briefing, and added my customary caveat that I will abort the takeoff if I do not like how it feels. They all acknowledged and I proceeded to taxi out of the little cove. I set the flaps to approximately 15 degrees, pulled the water rudders up, increased the mixture to full rich, and applied takeoff power in a direction away from and approximately perpendicular to the lodge to allow me to be nearly parallel with what little surface swell there was in the takeoff direction. The airplane quickly came on step and I set the flaps to takeoff setting. We rode through a couple of small swells. Everything felt comfortable. My last glance of the GPS I recall seeing a ground speed in the low to mid 30 kts. A moment later the aircraft received a side load from the left and this gave the aircraft a left yawing motion and I felt the floats loose rigidity. Out of the corner of my eye, I saw the left float rise toward me as if it were separated from the aircraft. The aircraft began rolling to the left, I had full right aileron control input but virtually no authority. A moment later the left wing caught the water surface, I felt the aircraft lurching forward, and pulled the throttle and prop back as the aircraft nose impacted the water. As the aircraft began to flip over in a cartwheel motion, I recall seeing and feeling the right wing bending upward. The aircraft was immediately completely submerged and upside down in the water.

I struggled to find my way out, finally located the magnetic compass mounted on the windscreen center divider and felt my way around to the pilot's door. I broke water and took a deep breath. I saw the two older boys on top of the wreckage screaming. I took a deep breath and dove down to the left main cabin door. I opened it, and pulled out one of the younger children. I placed him on the forward spreader bar, and began administering CPR. He began breathing very quickly. I yelled at the other boys to calm down and take him. I dove again and grabbed the next boy. Administered CPR to him on the spreader bar also and he began breathing fairly quickly as well. I handed him off, and dove once more and grabbed the mother. I administered CPR and she began breathing within a few moments. I handed her off and went down for the father. It took me a couple of attempts to get him out as he was caught on something. Finally I got him out. By this time a couple of small vessels had arrived. We pulled him out and onto the boat. Once on there we began to give him CPR. We asked if anyone in the boats around us had an AED. Someone brought one a few moments later. Everyone was breathing, except for the father. We continued CPR, and using the AED until the Coast Guard arrived some time later. It was obvious there was a lot of water in him. We attempted several times to turn him over and get the water out.

Once the Coast Guard arrived, we transferred everyone onto their boat. Two individuals and I continued to administer CPR on the father until we arrived on shore. Ambulances were waiting and a machine was strapped to him to continue administering CPR. We are all transported to the hospital. A Rust's pilot arrived and I was discharged from the hospital and returned home via a company 206 (which had landed at Tutka Bay Lodge shortly after the incident and later departed uneventfully to Homer).
