Aircraft Explosion

- ☒ None ☐ Both Ground and In-Flight
☐ In-Flight ☐ Explosion at Unknown Time
☐ On-Ground ☐ Unknown

Description of Damage to Aircraft and Other Property (Use additional sheet if necessary)

Aircraft was gound looped on the water. Damage was as follows. Aircraft was submerged as a result of float damage. LH float fwd half buckled up and the prop sliced through float. floats were sheered from aircraft, float fittings, and various strut attach points broke, two of the spreader bar castings broke as well. Floats remained attached to aircraft by a few flying wires and cables. The LH wing inboard spar and skins were damaged from the float as well as the LH wing strut was folded up into the wing. LH flap and airleron damaged Both LH and RH wing tips damaged. The fuselage took damage to the lower skins in various areas around where float struts and steps hit the skins. One lower half bulkhead just aft of the rear fuel tank is damaged at float step attach points. Top fuselage skin wrinkled aft of rear spar carry through. LH fwd top skin wrinkled around windshield area (recovery damage from straps). Lower engine cowl air intake damaged and skins wrinkled. lower air induction box on engine damaged. Prop strike on LH float with damage to propeller blades.

NARRATIVE HISTORY OF FLIGHT (Please type or print in ink)

Describe what occurred in chronological order, including circumstances leading to and nature of accident/incident. Describe terrain and include wreckage distribution sketch if pertinent. Attach extra sheets if needed. State departure time and and location, services obtained, and intended destination. Provide as much detail as possible.

June 27th 2019: The airrcft (N94DC) had returned from a previous flight and arrived at the airport dock. There the pilot then took on 4 passengers at the airport dock for his next flight. He next departed the Ketchikan airport dock at 9:41am local to land at the downtown harbor in order to refuel the aircraft for his trip to Clover Bay Lodge. The pilot flew the aircraft to the Ketchikan harbor where he did his base turn inside of Pennock Island and turned final for the harbor.

The pilot touched down abeam our company dock and on his slide out the aircraft verred to the left and then gound looped on the water. The aircraft then struck the RH and LH wing tips before coming to a stop. The floats at that point had sustained substantial damage and the aircraft began to sink.

The pilot secured the magnetos then began to assist the passengers in exiting the aircraft and helping them with life vests. He stayed in the cabin assisting the passengers and made sure everyone got out before exiting himself.

Upon exiting there was already a fishing boat and other small boats there to assist. All passengers and the pilot were helped onto the boat and taken to our dock.

Emergency services had already been notified by this point by our dispatcher and were at our base of operations before the passengers and pilot arrived at our dock in the boat. The passengers were checked out by the emergency service personell for injuries. One passenger was transported to the hospital for observation and was released within a couple hours. The other 3 passengers and pilot had no injuries that were reported.

In the mean time the aircraft had been secured to a larger fishing vesel by the horizontal stabilizer. It was towed to an nearby dock and secured to that dock. The aircraft was later that same day recovered out of the water and moved onto land and secured, out at Ward Cove 4 miles west of the harbor.

RECOMMENDATION (How could this accident/incident have been prevented?)

Operator/Owner Safety Recommendation

I feel the pilot touched down long, fast and flat. There also seemed to be a contributing factor I saw in the video footage from the cruise ship. A larger boat had left a wake and it looks to me as soon as the aircraft hit that it started its ground loop. And with the far shore line and an anchored sail boat coming up the pilot should have executed a go around. With him turning his base turn inside of Pennock island it left him with a shorter landing area. As well with the winds being westerly at the airport they are not always the same in the harbor. The harbor looked to be calm so he may have even had a slight tail wind on his final approach which carried him further down the landing area. It is quite common for the winds to be blowing a different direction in the harbor than at the airport which is only about a mile away. He may have also felt a little pressured with the pace of the summer season and the day itself.

I recommend three things for our operation:

1. More extensive training for new pilots on aborted landings and glassy water landings.
2. Not allowing first year pilots to execute short approaches into the harbor.
3. Having the aircraft return to the harbor to refuel before taking on passengers at the airport for their next flight.

MECHANICAL MALFUNCTION/FAILURE (If more space is needed, continue on separate sheet)

Was there Mechanical Malfunction/Failure? ☐ Yes ☒ No
(If yes, list the name of the part, manufacturer, part no., serial no., and describe the failure.)
