NOTAMS (D and FDC), AIRMETs, SIGMETs, PIREPs in effect at the time of the accident/incident:

DAMAGE TO AIRCRAFT AND OTHER PROPERTY		
Aircraft Damage ☐ None ☐ Substantial ☐ Minor ☒ Destroyed ☐ Unknown	Aircraft Fire ☒ None ☐ Both Ground and In-Flight ☐ In-Flight ☐ Fire at Unknown Time ☐ On-Ground ☐ Unknown	Aircraft Explosion ☒ None ☐ Both Ground and In-Flight ☐ In-Flight ☐ Explosion at Unknown Time ☐ On-Ground ☐ Unknown
Description of Damage to Aircraft and Other Property <i>(Use additional sheet if necessary)</i> Engine and front cowling broken from aircraft. Fuselage partially detached from wings. Some large gouges to terrain and fuel drained onto ground.		
NARRATIVE HISTORY OF FLIGHT <i>(Please type or print in ink)</i>		
Describe what occurred in chronological order, including circumstances leading to and nature of accident/incident. Describe terrain and include wreckage distribution sketch if pertinent. Attach extra sheets if needed. State departure time and and location, services obtained, and intended destination. Provide as much detail as possible.		
On July 17 on the second leg of a flight from Gainesville KGVJ to Fond Du Lac KFLD the engine on my airplane quit. I did a forced landing in a pasture approx 35 nm north west of Cleveland KRZR. We had stopped in Cleveland for fuel and to assess the weather. We waited in Cleveland for the latest on the hour weather reports on Foreflight. The weather was improving with both Cleveland and our next fuel stop showing VFR weather but with broken ceilings. We departed about 15:20 EST. When the engine quit I was in disbelief. We had just fueled up. I didn't think I was out of fuel. I switched pumps and then turned on the boost pump neither of which had any affect. I had just gone over a meadow so I turned back to look for a landing spot. I tried to radio my brother and discovered the whole panel was not working except for the PFD which had a backup battery. Realizing that it was the electrical system that failed I tried to reset the ignition and injection system by turning it off then back on. I did the same with the master switch neither having any effect. By that time I was over the meadow and didn't have enough room straight ahead to land. I was too low to do any more trouble shooting so turned my attentions to landing the airplane. There was another meadow to the west so I turned that direction maneuvering between the tall trees in the tree line that separated the two meadows. My airspeed was 74 kts going between the trees. I pitched down for some speed and tried to flare for landing. I was too slow and the airplane stalled and crashed. I believe the airplane bounced, one wing caught the ground and the airplane tumbled before stopping where it did.		

RECOMMENDATION (How could this accident/incident have been prevented?)**Operator/Owner Safety Recommendation**

It appeared to be a total electrical failure because none of the equipment on the panel was working. The PFD stayed on as it had a backup battery. The engine has electronic fuel injection. It also quit because of the electrical failure.

If the electronic fuel injection system had an automatic backup battery similar to the PFD the engine would have kept running.

MECHANICAL MALFUNCTION/FAILURE (If more space is needed, continue on separate sheet)

Was there Mechanical Malfunction/Failure? ☒ Yes ☐ No

(If yes, list the name of the part, manufacturer, part no., serial no., and describe the failure.)

I believe it was an electrical failure which caused the engine to quit. It could have been the master solenoid, the VP-X electronic breaker system or the wiring for those parts.

From the pictures I seen of the destroyed aircraft, i believe the components up to the VP-X are all in place on and behind the firewall and could be tested. The panel was laying on the ground so the connection from the master switch to the solenoid would have been severed.

**Total Time/Cycles
On Part**

628 (VP-X) Hours
Cycles

**Time Since This Part
Inspected/Overhauled**

338 (VP-X) Hours

FUEL & SERVICES INFORMATION
