Description of Damage to Aircraft and Other Property *(Use additional sheet if necessary)*

Both wings and engine were separated from the fuselage, and there is extensive damage to fuselage.

NARRATIVE HISTORY OF FLIGHT *(Please type or print in ink)*

Describe what occurred in chronological order, including circumstances leading to and nature of accident/incident. Describe terrain and include wreckage distribution sketch if pertinent. Attach extra sheets if needed. State departure time and location, services obtained, and intended destination. Provide as much detail as possible.

Aircraft PA-32R tail # N7632C departed Bethel airport at 1038 en-route to Kipnuk airport, approximately 95 statutory miles away, with the pilot and four passengers on board. Weather showed winds ESE at 5-10 knots with ceilings at 900' and 10 miles visibility. Terrain was flat tundra with a large amount of snow and few references to help determine the horizon. At 1141 the village agent in Kipnuk, Chris Paul, called Yute dispatch to report the airplane had not arrived. There had been no communication from the aircraft since the takeoff callout. At 1141 Wade Renfro, who had Operational Control, was contacted and the overdue aircraft checklist was then activated. All required agencies were contacted before 1200. An aircraft was launched at 1257 to search for the missing airplane which was located at 1330 with coordinates estimated at lat 160.20.001 and long 163.01.46, approximately 12 miles west of Tuntutuliak, in line with standard flight path to Kipnuk.

RECOMMENDATION (How could this accident/incident have been prevented?)

Operator/Owner Safety Recommendation

Based on the weather, terrain, and the pilot report of the aircraft which followed the flight path to search for the missing aircraft, and the fact that there was no radio call reporting any aircraft malfunction, it appears the likely cause of the accident was flat light or whiteout conditions and possibly entering IMC causing the pilot to become spatially disoriented, resulting in controlled flight into terrain. This could possibly have been prevented with more training on maintaining situational awareness while in flat light, with an emphasis on the importance of turning around prior to entering IMC while maintaining flight parameters through flying by instruments.

MECHANICAL MALFUNCTION/FAILURE (If more space is needed, continue on separate sheet)

Was there Mechanical Malfunction/Failure? ☐ Yes ☐ No
