Description of Damage to Aircraft and Other Property *(Use additional sheet if necessary)*

Complete loss due to impact forces and subsequent water damage.

NARRATIVE HISTORY OF FLIGHT *(Please type or print in ink)*

Describe what occurred in chronological order, including circumstances leading to and nature of accident/incident. Describe terrain and include wreckage distribution sketch if pertinent. Attach extra sheets if needed. State departure time and location, services obtained, and intended destination. Provide as much detail as possible.

N547LM was a medevac aircraft activated for a medical mission. The pilot and two medical personnel responded to the call. The accident pilot filed an FAA IFR flight plan for the destination and checked the weather at that time. N547LM began a takeoff on Runway 31 at PADU at approximately 08:00 AKST. The aircraft was brought to full power and, according to the accident pilot, all aircraft systems seemed to be operating correctly. The brakes were released and the aircraft accelerated down the runway. Approximately half way down the 4,500 foot runway, a passenger noted that the aircraft didn't seem to be accelerating as quickly as he'd experienced in the past. As he began to lift the nose of the aircraft for rotation, the nose sank back down. The aircraft lifted off a second time and the pilot reported an immediate "push from behind" that caused the stall warning to activate. In the immediate response to the stall warning activation, the pilot reduced the angle of attack. That reduction caused the nose of the aircraft to reduce to a pitch low enough that the pilot made visual contact with the water and believed a ditching was imminent. The pilot brought the nose of the aircraft up slightly and reduced power on the engines just prior to the impact. After the impact, the two passengers began removing the emergency overwing exit and managed to quickly deploy the life raft outside the aircraft. The passengers exited the aircraft and entered the raft followed by the pilot. At this point, the passengers and pilot noted that headlights were already pointing in their direction, and they were able to utilize cell phones to make contact to inform their dispatch center of the accident and call for additional help.

RECOMMENDATION (How could this accident/incident have been prevented?)

Operator/Owner Safety Recommendation

Greater limitations on tailwind takeoff for aircraft other than turbojet would assist in limiting the number of occurrences where potential tailwind/windshear events cause incidents/accidents. While the performance of the aircraft is the driving factor on turboprop departures in commercial on-demand operations, greater constraints should be determined and are warranted. Commercial operations in turboprop aircraft should be required to adhere to the same requirements of the turboprop aircraft with respect to tail wind operations.
