Description of Damage to Aircraft and Other Property *(Use additional sheet if necessary)*

Aircraft rolled onto its rights side after touching down to the ground. The engine was at idle when the aircraft rolled and all main rotor blades contacted the ground and were destroyed. The right side landing gear was crushed in the roll over. Both front windows were broken in the rollover. The right side of the the horizontal stabilizer was bent in the roll over. The fenestron blades contacted the edge of the fenestron during the rollover. It appears that a fenestron blade broke and entered the tailboom making contact with the tail rotor drive shaft which case the shaft to sheer.

NARRATIVE HISTORY OF FLIGHT *(Please type or print in ink)*

Describe what occurred in chronological order, including circumstances leading to and nature of accident/incident. Describe terrain and include wreckage distribution sketch if pertinent. Attach extra sheets if needed. State departure time and and location, services obtained, and intended destination. Provide as much detail as possible.

On March 5th, 2020 at approximately 11am local, N11QK an Airbus EC130 departed Hilo base for an air tour operation. During the flight the tour pilot observed noise, a strong vibration, and a flickering tailrotor gearbox chip light indication. The pilot stated the noise and vibration stopped after a few seconds and the tail gearbox chip light was no longer illuminated. The pilot made a radio call to a company aircraft in his flight, indicating he would be making a precautionary landing at Forest Geo. During the approach to the landing area the aircraft began to rotate to the left as the airspeed reduced. The pilot attempted to increase and reduce the rotation but was unable to regain forward flight control. The pilot reduced the engine power to idle and performed an autorotation. During the landing the aircraft rolled over. The pilot secured the engine and all occupants exited through the front of the aircraft as the windscreen had broken away.

RECOMMENDATION (How could this accident/incident have been prevented?)

Operator/Owner Safety Recommendation

Initial - Entire fleet inspected. Although the cause is still to be determined no other aircraft in the fleet were found to have issues in the fenestron.

Once the cause is determined a further course of action will be developed.

MECHANICAL MALFUNCTION/FAILURE (If more space is needed, continue on separate sheet)Was there Mechanical Malfunction/Failure? ☐ Yes ☐ No

(If yes, list the name of the part, manufacturer, part no., serial no., and describe the failure.)

It appears a fenestron blade may have broken off in flight. The reason for this failure is still being investigated.
