Description of Damage to Aircraft and Other Property *(Use additional sheet if necessary)*

Leading edge of one main rotor blade & left hand sliding door damaged.

NARRATIVE HISTORY OF FLIGHT *(Please type or print in ink)*

Describe what occurred in chronological order, including circumstances leading to and nature of accident/incident. Describe terrain and include wreckage distribution sketch if pertinent. Attach extra sheets if needed. State departure time and location, services obtained, and intended destination. Provide as much detail as possible.

After completing a job east of Delta Junction on the afternoon of September 5th the A/C was loaded with ops gear to return to Delta Junction. Pre start/take off checks (including security of latches and doors) was completed on the entire A/C by both pilot and mechanic before departing to Delta Junction to RON.

Personal over night items were unloaded via the pilots side sliding door.

On the morning of September 6 these personal items were returned to the A/C via the pilots sliding door and passengers front door.

The passengers sliding door was not used other than to check it for security for preflight and pre start purposes. This was checked by both pilot and mechanic by habit before start and flight.

Shortly after departing from Delta to Glenallen at around 700 feet and 110 knots a sudden loud bang and an associated left yaw was experienced as the left passenger door vacated the A/C. It went from fully secured to gone instantly.

An emergency landing was made to an immediately available grass area where the A/C was shut down and inspected for damage.
