Description of Damage to Aircraft and Other Property (Use additional sheet if necessary)

Crushed engine + front gear into Right side of motor mount + firewall. Some unknown wing damage, Left gear collapsed into Left struts.

NARRATIVE HISTORY OF FLIGHT (Please type or print in ink)

Describe what occurred in chronological order, including circumstances leading to and nature of accident/incident. Describe terrain and include wreckage distribution sketch if pertinent. Attach extra sheets if needed. State departure time and and location, services obtained, and intended destination. Provide as much detail as possible.

As Reported previously.

- (1) Completed Annual Aug 2020, need to replace struts per Piper AD. Ordered + installed day of Accident
- (2) Morning of Accident Sumped All 4 places + taxied across field to Mechanics hangar. Worked All Day Replacing struts. Taxied back to Runway "elephant ear" to check Rigging.
- (3) Engine ran normal, but @ 200' + end Runway Engine quit.
- (4) Two possible reasons for gaitting. a) we changed gaskets on GAS CAPS because excess leaking RAIN/SNOW. Mechanic cut new gaskets + added to old. maybe cap vent blocked. b) because we did change gaskets, when I sumped TANKS I WAS surprise to get very little water from left TANK. It had RAINED between Annual date + strut install date. My PARK place @ home has the nose + left TANK down slightly. Could be water in TANK but not in Sump.

RECOMMENDATION (How could this accident/incident have been prevented?)

Operator/Owner Safety Recommendation

- 1) No more than one gasket per gas cap make sure
TANK CAN VENT
- 2) Depending on park place, lower tail so ANY
water in TANK CAN drain back to sump
A lower front gear strut can cause nose to
low for tank sumping

MECHANICAL MALFUNCTION/FAILURE (If more space is needed, continue on separate sheet)Was there Mechanical Malfunction/Failure? ☐ Yes ☐ No

(If yes, list the name of the part, manufacturer, part no., serial no., and describe the failure.)

Unknown, ? Tank venting?
