Description of Damage to Aircraft and Other Property *(Use additional sheet if necessary)*

Left Gear Sheared from fuselage damaging gearbox, Left wing scraped and lightly wrinkled, wing cap damage, Left horizontal stabilizer scratched with light wrinkle and damage to elevator and elevator hinge. Propeller strike. Dented on lower left fuselage aft of gearbox. Large dent on right fuselage forward of gearbox.

NARRATIVE HISTORY OF FLIGHT *(Please type or print in ink)*

Describe what occurred in chronological order, including circumstances leading to and nature of accident/incident. Describe terrain and include wreckage distribution sketch if pertinent. Attach extra sheets if needed. State departure time and location, services obtained, and intended destination. Provide as much detail as possible.

I departed Willow, PAUO, after fueling the airplane at approximately 17:00 AKST. I taxied from the gas pump to Rwy 31 and departed to the southeast. Upon take-off there were no notable discrepancies. The flight to Tok, PFTO, was a smooth flight of 2.7 hours. Twenty-five miles from the airport I received the nearest ASOS from Northway, PAOR, at approximately 19:15 AKST. At approximately 19:30 AKST I crossed over Rwy 07-25 at midfield to assess the runway and the local wind. The wind sock indicated approximately 300 at 5 knots favoring Rwy 25. I flew a right pattern from midfield for Rwy 25. I selected full flaps on final with an airspeed of 70 mph for final approach. The approach was stabilized so after a final GUMPS I commenced to land. I touched down on centerline with a three point landing at approximately 60 to 65 mph. The plane went straight then slightly to the right and I corrected lightly with left rudder to centerline. At this point, with a higher ground speed, there was enough rudder authority to correct to centerline. The airplane then went very slightly to the left and I corrected lightly with right rudder to centerline. Abruptly it went sharply to the right again at which time I attempted to correct it back to centerline with left rudder pedals but the airplane did not respond. At this time 926LL had slowed to a point of little or no rudder authority and the tailwheel was not responding. I could not correct back to centerline. As the tail of the airplane came around to the left it began to go sideways skidding the left tire as it headed off the runway at a 45 degree angle. As the left gear touched the dirt on the side of the runway, it sheared and collapsed under the fuselage. The airplane then came to an abrupt stop at about 19:40 AKST off the north edge of Rwy 25 approximately 1000 ft from the threshold.

RECOMMENDATION (How could this accident/incident have been prevented?)

Operator/Owner Safety Recommendation

I have played the event over and over again in my head. If I would have known the tailwheel was going to fail I could have maybe used hard left break early on as it commenced to go sharply to the right. However that is only conjecture and at some point left break could have made the situation worse.

Also instead of rebuilding the tail wheel, it could have been replaced with a new one.

MECHANICAL MALFUNCTION/FAILURE (If more space is needed, continue on separate sheet)Was there Mechanical Malfunction/Failure? ☒ Yes ☐ No*(If yes, list the name of the part, manufacturer, part no., serial no., and describe the failure.)*

The Cessna 180H tailwheel assembly failed and did not caster properly. It locked to the right sending the airplane abruptly to the right.

Manufacture and part number unknown to me at this time.
