Description of Damage to Aircraft and Other Property *(Use additional sheet if necessary)*

Substantial damage to airframe and rotor assemblies due to impact with terrain. Main rotor assembly, tail rotor assembly, all drive shafts, over-running clutch, mast, and swash plate damaged beyond repair. Engine will require a sudden stoppage inspection and main rotor and tail rotor gearboxes will require complete overhaul. At this time unknown if airframe will be beyond economic repair. Basically 85% of all components will be thrown away.

Zero property damage.

NARRATIVE HISTORY OF FLIGHT *(Please type or print in ink)*

Describe what occurred in chronological order, including circumstances leading to and nature of accident/incident. Describe terrain and include wreckage distribution sketch if pertinent. Attach extra sheets if needed. State departure time and location, services obtained, and intended destination. Provide as much detail as possible.

On October 27, 2020 I, Peter Vorhes, went to the hangar to get ready for the day. Normal preflight, noticed no abnormalities. My first flight got to the hangar, we talked about their mission and boarded the aircraft. Normal start-up, warm-up, lifted off OGG to their landing zone. Flew for about an hour, returned to OGG. Hot refueled, had the equipment that I was going to need for HECO loaded on aircraft. Flew to Oahu HECO LZ, landed and shut down. We had to wait because the HECO personnel had not received a hold off on the line yet. Waited about 30 minutes, we talked about our plan to get four personnel and equipment up to the pole and wire they needed to work on. After they received the hold off myself and two HECO personnel boarded the aircraft. I took two up, came back, hooked on a load line and then flew their tools to them in a job box. Then returned to the LZ to transport the other two personnel.

I had a line inspection to do after getting these linemen in. I decided to go refuel prior to the inspection. Went and put in 30.7 gallons of fuel to top off. Started my clock when fueller stopped adding fuel. Resetting clock to "0." I then flew to substation north side of the Pali, contacted Kaneohe tower and told them where I was going and that I would be working for HECO doing a power line inspection. They gave me a squawk and asked me to advise them when I was airborne.

I landed, picked up the two line inspectors and then departed the LZ. Once airborne I contacted tower, told them we were airborne and where we needed to go. Did the inspection, back on the LZ clock said 54 minutes. They exited the aircraft and I departed to LZ. Once in the air I again contacted the tower, thanked them for their help and departed the area.

I then called my other workers to see if they were ready for pickup. They said they were ready, clock read 57 minutes when I landed to pickup the first two linemen. Took them to the LZ, put on the long line and returned up to the pole. I then hooked up to the load and began to lift it off the ground. Just as I got it off the ground I heard rotor RPM start to drop. The engine out horn and light came on. I realized something was wrong and released the load. RPM continued to drop and I knew I was having some type of major event. I pushed the nose downhill for airspeed and lowered the collective. Within seconds I knew I was not going to fly away and went for the shortest trees and clearest area.

I flew it all the way to the tops of the trees, tried to stop it and pulled collective to lessen the impact. As I came through the trees the main rotor blades continued to contact trees. I stopped upright and uninjured. I then realized the engine was still running and was afraid of the main rotor blades entering the cockpit. I pulled the fuel shut off and closed the throttle. Everything then stopped. I realized I was uninjured. I turned off the battery and started to exit the aircraft. Once outside I realized there was no movement, no fire and I was ok.

I yelled up to the linemen on the pole and told them I was ok. I said not to try to get there and again that I was uninjured and alright.

I then secured the area, looked around, disconnected the battery and started by calling my director of operations, office and director of maintenance. After getting ahold of them and letting them know I was ok, I took some pictures and video of the scene and waited for help to arrive.

RECOMMENDATION (How could this accident/incident have been prevented?)

Operator/Owner Safety Recommendation

Unknown at this time. Windward Aviation suspects a possible low-side governor failure or a broken pneumatic line.

MECHANICAL MALFUNCTION/FAILURE (If more space is needed, continue on separate sheet)Was there Mechanical Malfunction/Failure? ☒ Yes ☐ No

(If yes, list the name of the part, manufacturer, part no., serial no., and describe the failure.)

Windward Aviation doesn't know which part failed, but there was a mechanical failure that caused the engine to decelerate to idle while in powered flight.
