Description of Damage to Aircraft and Other Property *(Use additional sheet if necessary)*

Left wing tip and left aileron bent, which was determined to be substantial damage by the NTSB.

NARRATIVE HISTORY OF FLIGHT *(Please type or print in ink)*

Describe what occurred in chronological order, including circumstances leading to and nature of accident/incident. Describe terrain and include wreckage distribution sketch if pertinent. Attach extra sheets if needed. State departure time and location, services obtained, and intended destination. Provide as much detail as possible.

Coming in for a landing on runway 2R, there was a slight right crosswind. I planned for a wheel landing with the right wing slightly low to account for the crosswind. When the plane touched down on mains, the right wing started to come up and the plane started turning to the right. Assuming the wind correction was sufficient, and not knowing why the plane was turning, I did not fight it and let the airplane go to the right. The plane stopped facing south, turned around 180 degrees on the side of the runway. The left wing was on the ground. The plane immediately righted itself, so I drove off the runway to my parking spot on the east ramp.

RECOMMENDATION (How could this accident/incident have been prevented?)

Operator/Owner Safety Recommendation

- When the plane is veering to the right, try to correct it to back to the left, without oscillating.
- Under similar conditions, consider doing a 3-point landing in lieu of a wheel landing.
- Get some additional training in this plane on landing technique.

MECHANICAL MALFUNCTION/FAILURE (If more space is needed, continue on separate sheet)Was there Mechanical Malfunction/Failure? ☐ Yes ☒ No

(If yes, list the name of the part, manufacturer, part no., serial no., and describe the failure.)
