Description of Damage to Aircraft and Other Property *(Use additional sheet if necessary)*

Damage to left wing tip and left elevator tip during landing, possible damage to the gear. Damage to left wing, wing tip, and aileron, and possible to right wing. Possible engine damage from prop striking snow. Damage to prop, spinner, and engine cowling. Minor interior damage.

NARRATIVE HISTORY OF FLIGHT *(Please type or print in ink)*

Describe what occurred in chronological order, including circumstances leading to and nature of accident/incident. Describe terrain and include wreckage distribution sketch if pertinent. Attach extra sheets if needed. State departure time and location, services obtained, and intended destination. Provide as much detail as possible.

Nothing abnormal occurred initial taxi or takeoff, pattern was flown normal as well as approach. Approximately 12 inches of manifold pressure was left in during final approach and flare and touchdown. After touchdown power was reduced and aircraft began to settle. At this point the aircraft suddenly made a sharp turn to the right and control inputs could not correct. Power was then applied and we took back off.

The instructor then flew the pattern and approach with no issues. He also left minimal power in until touchdown and then pulled power which resulted in the same sudden turn to the right. He attempted to correct but was unable. The aircraft began sliding sideways down the runway which caused the left wing to dip and contact the ground. As we exited the runway on the right side and contacted the snow bank this forced the aircraft to swing back around and then tip forward and roll onto its back.

RECOMMENDATION (How could this accident/incident have been prevented?)

Operator/Owner Safety Recommendation

I am unable to determine the cause of the incident and therefore cannot offer any recommendations.

MECHANICAL MALFUNCTION/FAILURE (If more space is needed, continue on separate sheet)Was there Mechanical Malfunction/Failure? ☒ Yes ☐ No

(If yes, list the name of the part, manufacturer, part no., serial no., and describe the failure.)

The nature and circumstances of the incident cause me to believe that there was something mechanical that forced the aircraft to turn rapidly to the right during both landings. However, I do not know what that could be.
