Description of Damage to Aircraft and Other Property *(Use additional sheet if necessary)*

Mostly considerable damage to wings and landing gear from contact with trees. Fuselage and tail very little damage.

NARRATIVE HISTORY OF FLIGHT *(Please type or print in ink)*

Describe what occurred in chronological order, including circumstances leading to and nature of accident/incident. Describe terrain and include wreckage distribution sketch if pertinent. Attach extra sheets if needed. State departure time and location, services obtained, and intended destination. Provide as much detail as possible.

Terrain: level with thick smaller spruce trees/muskeg.

weather: good, no wind or precipitation, good visibility day time.

Engine started losing power at about 700 ft elevation AGL. Mixture worked/vibrated lean and mixture control cable came apart behind instrument panel and was inoperable. Engine quit and would not restart so a forced landing was imminent. All terrain within gliding distance was covered with small/medium spruce trees. A controlled landing into the trees resulted in no injuries to either the pilot or the passenger, but considerable damage to the fronts of the wings and landing gear. Fuselage/tail and engine were intact.

The flight originated at a private strip (McMahan) in Gakona, Alaska, and lasted approx 2 hours on a local personal sightseeing flight. The flight was to return to the departure location. We ended up approx 3.5 miles SE of the intended landing strip. A cell phone call to my son alerted him to do a flyover and point the way to walk to a pickup spot approx 2 miles away. We stayed in touch with a handheld VHF radio and cell phones.

RECOMMENDATION (How could this accident/incident have been prevented?)**Operator/Owner Safety Recommendation**

Having a spring on the mixture arm on the carburetor that would pull mixture to full rich in case of a cable malfunction/break.

MECHANICAL MALFUNCTION/FAILURE (If more space is needed, continue on separate sheet)

Was there Mechanical Malfunction/Failure? ☒ Yes ☐ No

(If yes, list the name of the part, manufacturer, part no., serial no., and describe the failure.)

Mixture control cable -simple push/pull-son't know manufacturer or specifics

When pushed hard to richen mixture, the spiral wrapped jacket seperated from the bezel (solid part) of the mixture control, so it did not work at all to richen mixture when pushed in as the wire inside just bowed out and didn't slide through the jacket.
