Description of Damage to Aircraft and Other Property *(Use additional sheet if necessary)*

Right skid damaged, aft cowling bent and wrinkled, bottom vertical fin and stinger bent, main rotor blade wrinkled and both end caps damaged.

NARRATIVE HISTORY OF FLIGHT *(Please type or print in ink)*

Describe what occurred in chronological order, including circumstances leading to and nature of accident/incident. Describe terrain and include wreckage distribution sketch if pertinent. Attach extra sheets if needed. State departure time and location, services obtained, and intended destination. Provide as much detail as possible.

At 1:15pm Monday August 30th, I Sean FitzGerald Commercial pilot [REDACTED] encountered Low Rotor RPM decay in N878CB, a Robinson R44 II helicopter, and was unable to correct the decay resulting in contact with the ground making the helicopter unairworthy. On this Monday I was slinging one hundred gallon propane tanks on a ten foot line from Idaho Bay at sea level up to the Coast Guard site on top of Mt. Althorp at 2400ft. The winds were calm at the site with good visibility, the temperature was 11 degrees Celsius, I had made 10 trips the previous day with the same load.

I took off from Idaho Bay with a full propane bottle at 1pm, making a radio call to the propane tech receiving the load at 5 minutes out. I confirmed the site was clear and winds calm, and the approach would be the same as the day before. I ascended the north ridge and turned into the site to the East. My climbing approach was halted by two crew members digging through open fish totes in the flight path to the landing zone. I halted my approach in a hover while the crew closed tote lids and vacated the area. With crew out of the way I resumed my approach. Moving forward I shifted my attention to the load outside, making sure to clear the terrain and totes on the ground. The helicopter started to settle and I looked to the Tach gage and saw the RPM decaying with the low rotor RPM horn and light coming on and immediately lowered the collective. At this point I was twenty feet above the ground.

The propane tank hit the ground first tipping forward, I hit the cargo release and the helicopter came down on top of the tank. The tail stinger contacted the ground but not the tail rotor itself. I immediately closed the throttle, and the main rotor clipped a Coast Guard tank lid. I pulled the fuel mixture and fuel shut off. Main rotor blades came to a stop after pulling the rotor brake with no more contact. All electronics turned off, everybody on the ground safe, no flying debris. Upon walk around- no leaking fuel or oil, right skid bent in back, sheet metal around squirrel cage bent and wrinkled, bottom vertical fin and stinger bent, one main rotor blade wrinkled and both end caps damaged.

RECOMMENDATION (How could this accident/incident have been prevented?)

Operator/Owner Safety Recommendation

Additions to training manuals for 135 and 133 to include flying at gross weight with and without external loads. Also to have the pilots check for available power in an OGE hover with plenty of altitude and escape routes prior to committing to the approach.
