Description of Damage to Aircraft and Other Property *(Use additional sheet if necessary)*

Damage to right wing and right elevator

NARRATIVE HISTORY OF FLIGHT *(Please type or print in ink)*

Describe what occurred in chronological order, including circumstances leading to and nature of accident/incident. Describe terrain and include wreckage distribution sketch if pertinent. Attach extra sheets if needed. State departure time and location, services obtained, and intended destination. Provide as much detail as possible.

Departure from PAGQ at approximately 11:06 local time. Requested flight following from Anchorage approach on 119.1 when we reached 4 miles south of Big Lake VOR. Instructed by Anchorage Approach to maintain VFR at or below 3,000 feet, also to maintain westerly heading until on the west side of the Big Su river before crossing cook inlet/turnagain arm. Flight following services terminated after crossing cook inlet/turnagain arm approximately 25 NM from PASX airport. Switched over to CTAF, obtained AWOS for PASX which called for calm winds, SKC. Traffic on CTAF utilizing runway 25, so called inbound for 25 gravel - favored by calm winds and angle of the sun on the horizon to avoid sun blinding on final.

Touched down on runway 25S (gravel) without incident at approximately 12:47 local time and began roll-out. PIC reached down to retract flaps at which time the airplane began to veer to the right. Attempted to correct with pressure on the left rudder. Airplane began to fishtail, at which time PIC attempted to correct with breaking action - airplane ground-looped to the left off gravel and into dirt, at which time the right wing struck the dirt. There was no propeller strike and airplane righted itself after wing impact.

After ensuring safety of all passengers, PIC commenced appropriate engine cutoff and powered down in order for passengers to exit the aircraft.

RECOMMENDATION (How could this accident/incident have been prevented?)

Operator/Owner Safety Recommendation

Loss of directional control overcompensated with rudder rather than braking action- utilize brakes once on rollout. Avoiding flap retraction while on rollout to minimize distractions.
