Description of Damage to Aircraft and Other Property *(Use additional sheet if necessary)*

Right wing: damage to ribs leading edge, and bent spar. Left wing: bent ribs, wing tip, leading edge, struts crushed. propeller bent. rudder top crushed.

NARRATIVE HISTORY OF FLIGHT *(Please type or print in ink)*

Describe what occurred in chronological order, including circumstances leading to and nature of accident/incident. Describe terrain and include wreckage distribution sketch if pertinent. Attach extra sheets if needed. State departure time and and location, services obtained, and intended destination. Provide as much detail as possible.

On approach to off feild landing area tuned in 2ak1 weather. heard wind at 15 gusts to 30. was not feeling like the gust were that bad and felt overconfidnet in my abillitys. flew around landing area, lined up and attempted landing. after dropping below trees approx 25 feet above the ground a gust of wind lifted my right wing to what felt like near vertical and blew me towards the trees to my right. i applied power to straiten out and level myself. i was able to regain the center of the runway and level myself. i felt myself hit the ground, so I pulled power as i felt i would not be able to have enought time to get off and away from the trees. i applied breaking action to keep from running off into the heavy brush and trees at the end of the strip. I applied to much breaking action and the planes tail began to rise and i nosed all the way over. no debrie feild it was quite a slow nose over. i belive this all happend at around 14:30-1500 9-18-2021

RECOMMENDATION (How could this accident/incident have been prevented?)

Operator/Owner Safety Recommendation

i should of turned around and waited for the winds to die down.
