NARRATIVE HISTORY OF FLIGHT *(Please type or print in ink)*

Describe what occurred in chronological order, including circumstances leading to and nature of accident/incident. Describe terrain and include wreckage distribution sketch if pertinent. Attach extra sheets if needed. State departure time and and location, services obtained, and intended destination. Provide as much detail as possible.

I departed Issygok lake on the Nigu river at approx. 1320 on the 21st of August for a 4.6 mile flight to Jobe lake. Upon leveling out at approx. 500 ft agl and setting up on a base to land SW at Jobe lake there was a loud bang and no power. I made a decending 90 degree turn into the wind which was less then 10 mph and flared out to land on the tundra. Upon stopping the propeller continued to wind mill for a couple of minutes. The airplane was intacked and no damage was visible. Upon getting aircraft back to Bettles the mechanics noticed the crumpling behind the engine mounts where when the engine siezed the propeller tried to keep spinning and the mass and torque snapped the crank and twisted the firewall an engine mounts

RECOMMENDATION (How could this accident/incident have been prevented?)

Operator/Owner Safety Recommendation

The engine was in crise flight when the engine siezed. Something failed internally causing the engine to lock-up. Suggest calling an engine overhaul shop and discuss possibilities. The pilot did an excellent job handling this situation, experience counts. The mechanics do nothing internal with this engine except for normal/routine maintence.

MECHANICAL MALFUNCTION/FAILURE (If more space is needed, continue on separate sheet)Was there Mechanical Malfunction/Failure? ☐ Yes ☐ No

(If yes, list the name of the part, manufacturer, part no., serial no., and describe the failure.)

We are not an engine overhaul shop, we do not know what happened, however, we would like to know.
