Description of Damage to Aircraft and Other Property *(Use additional sheet if necessary)*

Left wing bent upward. Right wing bent downward. Tail bent downward and broken off. Landing gear bend or broken off. Belly pod destroyed. Engine separated from the airplane. Rear doors detached. Windscreen gone. Other significant damage to the plane.

NARRATIVE HISTORY OF FLIGHT *(Please type or print in ink)*

Describe what occurred in chronological order, including circumstances leading to and nature of accident/incident. Describe terrain and include wreckage distribution sketch if pertinent. Attach extra sheets if needed. State departure time and location, services obtained, and intended destination. Provide as much detail as possible.

Some of this information was received from speaking with a passenger, who has some aviation knowledge and was wearing a headset during the flight. Some info was available from what the pilot is able to remember.

The pilot spoke with a friend in Port Alsworth around 11:50am and asked that he track the flight. The plan was to fly as far as Iliamna and wait for the weather in Port Alsworth to improve. The weather in Iliamna at that time was MVFR, with 3 miles visibility. The plane left Levelock for Iliamna at around 11:56am. It's about a 70mn trip. The weather in Levelock was estimated by the passenger to be around 3000 overcast and 10 miles visibility, although there is no reporting station there.

As the plane got closer to Iliamna, the weather had deteriorated and the pilot requested a Special VFR clearance with Kenai Radio through the Iliamna RCO. The clearance was received and read back. At this time, the plane was following the coast of Lake Iliamna, slightly off shore. The pilot recalls circling once outside of the Class E surface area while waiting for the Special VFR clearance.

Lake Iliamna is a very large frozen and snow covered lake, with slightly rising wooded terrain to the north. The plane was traveling easterly, so the terrain would have been on his left and the lake on his right. The pilot had planned to fly to the mouth of the Newhalen River which runs approximately north and south. From there they would turn left to the airport. The airport is a short distance from the mouth of the river, maybe 2-3 miles. The mouth of the river is on final for runway 36 at Iliamna.

Before reaching the mouth of the river, the pilot made the decision to divert to Iguigig due to the visibility getting worse the closer they got to the airport. Iguigig is about 40mn to the WSW of Iliamna on the opposite side of Lake Iliamna.

The pilot began to make an approximate 20 degree right hand turn over the frozen lake to find a reciprocal heading. He noticed they were losing altitude and remembers increasing power and pitch. Around this point he "switched to instruments". The passenger recalls looking to his right and it was like looking at a "white sheet of paper" with the sky blending with the frozen lake. Moments later, at around 12:35pm, the plane hit the ice in a slight right turn. Both the pilot and passenger said that there were no mechanical issues before the plane hit.

RECOMMENDATION (How could this accident/incident have been prevented?)

Operator/Owner Safety Recommendation

Bret Zimmerman has been diligent to fly under the hood every year during training with an instructor. This needs to continue and certainly include training in inadvertent flights into IMC.

Understanding the consequences of spacial disorientation over snow covered terrain, especially in flat light conditions, cannot be stressed enough. This should be included in yearly and biannual training.

I think it's important to go over the decision making process and even what outside pressures could be in play, and what could have prevented this flight from happening. Was there possibly get-home-itis or overconfidence? Was there reluctance to turn around before the weather got too bad for any reason? It's important to know your own decision making tendencies, and find ways to break the accident chain.

Having and adhering to personal weather minimums (especially for the geographical area that the pilot is often flying and can potentially feel overly confident in) is important and should be included and reevaluated every year during training.
