NARRATIVE HISTORY OF FLIGHT (Please type or print in ink)

Describe what occurred in chronological order, including circumstances leading to and nature of accident/incident. Describe terrain and include wreckage distribution sketch if pertinent. Attach extra sheets if needed. State departure time and location, services obtained, and intended destination. Provide as much detail as possible.

We returned to N6332D in Takeetna around 1915 AKST on March 19th 2022. A preflight was performed on the plane to include checking the fuel and oil capacities. The passengers entered the plane and sat in the back and right seats. I primed the engine twice before starting. The engine started normally. We sat with the engine running in the transient parking area while listening to the automated weather twice because I was unable to hear the altimeter setting on the first rotation. I determined there was a low risk for carb ice with an 8° temperature due point spread and that winds were light and a 19 departure would be appropriate. After setting the altimeter, compass, and Garmin 650, I taxied from the north transient parking to the beginning of runway 19. I positioned the aircraft to face the approach to 19. I came to a full stop before the holdshort line. I performed a full run-up at 1800 rpm. The fuel, mixture, carburetor heat, magnetos, primer, and instruments were checked with no adverse reactions. Around 1935 AKST I announced to Takeetna CTAF on 123.6 that 32D would be taking off 19 with a southbound departure. After completing a ground s-turn to clear the area for aircraft, vehicles, or hazards, I taxied onto runway 19, lined up with the centerline and executed a no flap, full power take-off. For security, close to occupants in all seats, I rotated at 64 kts indicated around halfway down the runway and climbed out at V_x. Reaching approximately 150-200 ft the engine lost power. I leveled the nose to maintain airspeed and proceeded to find my...

landing area directly ahead of the airplane because of low altitude. The best option available was in the snow field passed the departure end of the runway. All occupants were instructed to brace. I made a radio call to PATK CTAF to advise 32D was going down. I maintained best glide until 10-15ft from the ground and attempted to bleed off as much airspeed as possible while in ground effect to minimize the impact. I brought the plane down before reaching the trees just south of the airport. The main landing gear touched down symmetrically first, with the drag presented from the snow, I quickly ran out of elevator authority to keep the nose off the ground, the nose gear sheared off when it entered the snow. When the nose gear sheared, the nose of the aircraft came down into the snow and flipped the plane one 180° turn over the lateral axis. Once the aircraft was fully stopped, the emergency memory items were completed to minimize the risk of fire and injuries to passengers. All occupants were suspended by seat belts. I was the first to release my seat belt and open the exit on the left side, the ~~left~~ right exit was opened by Joshua and all occupants were safely escorted through the egress points and away from the site. After assessing the site and aircraft and determining there was no danger, Joshua and I approached the aircraft to retrieve essential belongings to contact required ~~personnel~~ personnel. First responders were on the scene quickly. All occupants had no injuries and received medical attention on site. We were taken to a local's home after they were alerted by another pilot that there had been an accident.

I HEREBY CERTIFY THAT THE ABOVE INFORMATION IS COMPLETE AND ACCURATE TO THE BEST OF MY KNOWLEDGE
