Description of Damage to Aircraft and Other Property *(Use additional sheet if necessary)*

Approximately 1 foot forward of the tail section on the fuselage, a 2 foot section of the inner framework bent and broke. A single horizontal elevator is bent as well as a portion of the right wingtip to include approx 6 inches of the right aileron.

NARRATIVE HISTORY OF FLIGHT *(Please type or print in ink)*

Describe what occurred in chronological order, including circumstances leading to and nature of accident/incident. Describe terrain and include wreckage distribution sketch if pertinent. Attach extra sheets if needed. State departure time and location, services obtained, and intended destination. Provide as much detail as possible.

On 28 May 2022, N5773M left a private strip in North Pole, Alaska at around 10 a.m. local for Gulkana, Alaska to refuel. The aircraft had an uneventful flight to Gulkana. The aircraft was landing on 33L, a gravel strip at the airport with a direct crosswind from the left. The aircraft had a smooth touchdown at the appropriate spot past the threshold and on speed on centerline. During the landing roll out, the aircraft began to sway left and right and eventually started to track further left. Full right brake/rudder was applied as the aircraft began to track towards a departure of the runway surface on the left side of the runway. The surface outside of the gravel runway is tundra with water, ditches, and rough terrain. As the aircraft departed the runway at approximately 20 knots and a heading approximately 20 degrees (310) left of the runway heading (330), the left tire hit a bump/trench in the tundra and caused the aircraft to spin 180 degrees. The aircraft came to a rest with a heading opposite of the landing runway (150) and approximately 15 feet from the runway surface. While in the spin, the tail section of the tail wheel aircraft also came in contact with the tundra at a perpendicular angle and crumpled the fuselage approximately 1 foot forward of the tail flight control components. Additionally, while coming to a stop 180 degrees off of the runway heading, the right wing grazed the ground and acted as a kick stand to stop the outward force of the counter clockwise spin. There were no injuries and both passengers exited the aircraft without incident.
