Description of Damage to Aircraft and Other Property *(Use additional sheet if necessary)*

prop strike, wing tip damage, tail damage

NARRATIVE HISTORY OF FLIGHT (Please type or print in ink)

Describe what occurred in chronological order, including circumstances leading to and nature of accident/incident. Describe terrain and include wreckage distribution sketch if pertinent. Attach extra sheets if needed. State departure time and location, services obtained, and intended destination. Provide as much detail as possible.

Departed 51AK with an intended off airport landing in the Chickaloon river area. Then some touch and goes at PAUO, then a return to 51AK.

Landing on the remote strip in the Chickaloon river area. Estimated runway to be 1500' long. Winds were reported by aircraft on the ground to be 10mph.

I flew a normal downwind and base, rolled out on final at 500' with full flaps and noted the crosswind.

I bounced the landing near full flap stall speed and subsequently picked up a gust that lifted the left wing and turned the plane downwind and toward a small bank, mound and ditch, also toward a parked aircraft.

I initiated a go around but was pointed at the parked aircraft. Rudder to the right toward the bank, to avoid the aircraft, then rudder to the left to avoid the bank, but settled into the ditch near the bank.

Left wing tip contacted the ground at some point with substantial damage, Right wing tip also contacted the ground with minor damage.

The propeller also contacted the ground with substantial damage. Tail section is damaged and bent.

Exited aircraft through normal door, normally. No injuries.

ELT-

ELT activated and was turned off. No assistance was required.

ACR345 was installed, registered, and satellite tested in 2020. a self-test fault was registered on the unit several weeks after installation.

So the unit was returned to ACR for repair and re-programming. Unit was re-installed a month later, self tested good. I did not satellite test it at that time.

When the ELT activated, it was received by the RCC, but came across as unregistered.

I believe something was changed on the ELT during re-programming that may have dropped the registration. I received no guidance from ACR after the re-program to indicate that a new registration was required.

RECOMMENDATION (How could this accident/incident have been prevented?)

Operator/Owner Safety Recommendation

First landing at this location. gusty wind conditions were unknown. I tried to land on the first approach. Should have done a low approach to survey the conditions and unimproved runway. Then do a touch and go to feel the runway. I tried to do a 3-point landing and should have done a wheel landing due to the gusty cross winds.
complacency- 2 other aircraft had already landed and gave me no indication that there were any adverse weather or runway issues.
