NARRATIVE HISTORY OF FLIGHT (Please type or print in ink)

Describe what occurred in chronological order, including circumstances leading to and nature of accident/incident. Describe terrain and include wreckage distribution sketch if pertinent. Attach extra sheets if needed. State departure time and and location, services obtained, and intended destination. Provide as much detail as possible.

Departed Merrill Field @ 151850t in pattern Touch + Goes. Winds were mild to moderate with occasional mild to moderate brief crosswinds, usually inconsistent.

As I turned off the runway on the final landing, speed was slow, leaving no rudder control. Turning therefore was dependent on the left brake. At that time the plane was hit by a crosswind gust; stronger than I had seen before. Seeing that the force of the gust was preventing the brake from making the desired turn, I gave a quick burst of power to give some rudder control. This had the desired effect in that it swung the nose. But it was too late, and it caused the wing tip to hit the light much harder than it would have otherwise.

RECOMMENDATION (How could this accident/incident have been prevented?)

Operator/Owner Safety Recommendation

I should have simply cut the power off when I saw that the turn was not not going properly
