NARRATIVE HISTORY OF FLIGHT *(Please type or print in ink)*

Describe what occurred in chronological order, including circumstances leading to and nature of accident/incident. Describe terrain and include wreckage distribution sketch if pertinent. Attach extra sheets if needed. State departure time and location, services obtained, and intended destination. Provide as much detail as possible.

Paperwork including weight and ballance and risk assesment forms were filled out and flight details were discused with student before going to the aircraft. Aircraft was throughly preflighted and main tanks were topped off with 100LL. We taxied out to the run up area and preformed all applicable runs ups using checklists to include satsisfactory checks of the magnetos and carbureator heat. This process took about 17 minutes to bring the aircraft up to temp for take-off. Upon succesful completion of preflight checks and weather information gathering we taxied for take off. Take off was uneventful with no apparent issues or indication of engine issues. Shortly after a right turn out all engine power was lost and the propellor began to windmill. Immediatly once this happened emengcy procedures began. We switched fuel tanks, verified mixture was rich, verified magnetos were on both, applied carb heat, cycled the primer, pitched for best glide, and made two radio calls to tower letting them know of our situtation. Tower had cleared me back to the airport but it was too far. I decided the best place to land was a quiet road away from town. I set up for landing to include ensuring seatbelts were buckled. Upon landing there was a car on the road that was slowing down. In order to avoid the car I made a slight turn which caused my right tire to catch some soft snow on the edge of the road. Due to the packed snow on the road surface I had no traction for effective braking and was pulled into the snowberm off the side of the road were the aircraft came to a full stop. The preceeding car did not stop, however the next car coming down the road did. The tail of the aircraft was in the road and soon several additional people arrived and we moved the aircraft to a safe location accross the road. At some point in time I had pushed the emergency button on the spider tracks and company personal arrived on sceene soon after.
