

NATIONAL TRANSPORTATION SAFETY BOARD

NTSB Form 6120.1

PILOT/OPERATOR AIRCRAFT ACCIDENT/INCIDENT REPORT

Email the pilot/operator aircraft accident/incident report to the investigator-in-charge of your accident/incident. If email is not available, mail the report per the instructions below.

If your accident/incident occurred in Maine, Vermont, New Hampshire, Massachusetts, Connecticut, Rhode Island, New York, New Jersey, Pennsylvania, Maryland, Delaware, Virginia, West Virginia, Kentucky, Tennessee, North Carolina, South Carolina, Mississippi, Alabama, Georgia, Florida, the District of Columbia, Puerto Rico, or the US Virgin Islands, send the form to: NTSB, ERA, 45065 Riverside Parkway, Ashburn, VA 20147.

If your accident/incident occurred in Ohio, Michigan, Indiana, Wisconsin, Illinois, Minnesota, Iowa, Missouri, Arkansas, Louisiana, North Dakota, South Dakota, Nebraska, Kansas, Oklahoma, Texas, Colorado, or New Mexico, send the form to: NTSB, CEN, 4760 Oakland Street, Suite 500, Denver, CO 80239.

If your accident/incident occurred in Montana, Wyoming, Idaho, Utah, Arizona, Nevada, Washington, Oregon, California, Hawaii, or the territories of Guam or American Samoa, send the form to: NTSB, WPR, 505 South 336th Street, Suite 540, Federal Way, WA 98003.

If your accident/incident occurred in Alaska, send the form to: NTSB, ANC, 222 West 7th Avenue, Room 216, Box 11, Anchorage, AK 99513.

Rules pertaining to notification of aircraft accidents and incidents, as well as overdue aircraft are found in 49 Code of Federal Regulations (CFR) Part 830 http://www.ecfr.gov/cgi-bin/text-idx?c=ecfr&tpl=/ecfrbrowse/Title49/49cfr830_main_02.tpl. These rules state the authority of the NTSB, define accidents, incidents, injuries, and other terms, and provide procedures for initial and immediate notification of accidents and incidents by aircraft pilots/operators.

A. APPLICABILITY

The pilot/operator of an aircraft shall send a report to the office listed above, based on accident/incident location; immediate notification is required by 49 CFR 830.5(a). **The report shall be filed within 10 days after an accident for which notification is required by Section 830.5, or after 7 days if an overdue aircraft is still missing.**

An aircraft accident, as defined in 49 CFR 830.2, is determined as an occurrence that involves a fatality or serious injury, or substantial damage to the aircraft. For occurrences that do not involve a fatality, the determination that the occurrence is an accident can be appealed by writing to the Director, Office of Aviation Safety, NTSB, 490 L'Enfant Plaza, S.W., Washington, D.C. 20594.

INSTRUCTIONS TO PILOTS/OPERATORS FOR COMPLETING THIS FORM

It is necessary that ALL questions on this report be answered completely and accurately.

If more space is needed, continue on a blank sheet of paper.

Nearest City/Place: Use the name of the nearest community in the state where the accident/incident occurred.

Date/Time: Indicate the date and local time of the event. Be sure to indicate the time zone.

Phase of Operation: Indicate the phase of operation during which the accident/incident occurred.

Aircraft Information: Enter aircraft make and model information as indicated on the aircraft registration certificate, including series. If the involved aircraft is certified as "amateur-built," include the name of the producer of the kit or plans, unless an NTSB employee instructs otherwise.

Maximum Gross Weight: Enter the certificated maximum gross weight for the aircraft involved in the occurrence. This should be the same as the maximum gross weight indicated on the aircraft weight and balance documents.

Engine: Enter engine make and model information as indicated on the engine data plate.

The NTSB uses this form for aircraft accident prevention activities and for statistical purposes. NTSB regulations (49 CFR Part 830) require that **ALL** questions be answered completely and accurately. Completion of this form will take approximately 60 minutes. The NTSB does not guarantee the privacy of any information provided in this form. You need not complete this form unless it displays a valid OMB control number, in accordance with 5 C.F.R. § 1320.5(b), which applies to this collection of information.

B. DEFINITIONS

1. "Aircraft Accident" means an occurrence associated with the operation of an aircraft that takes place between the time any person boards the aircraft with the intention of flight and all such persons have disembarked, and in which any person suffers death, or serious injury, or in which the aircraft receives substantial damage. For purposes of this form, the definition of "aircraft accident" includes "unmanned aircraft accident," as defined at 49 CFR 830.2.

2. "Substantial Damage" means damage or failure that adversely affects the structural strength, performance or flight characteristics of the aircraft, and that would normally require major repair or replacement of the affected component. NOTE: Engine failure or damage limited to an engine if only one engine fails or is damaged, bent fairing or cowling, dented skin, small puncture holes in the skin or fabric, ground damage to rotor or propeller blades, and damage to landing gear, wheels, tires, flaps, engine accessories, brakes, or wing tips are not considered "substantial damage" for purposes of this report.

3. "Operator" means any person who causes or authorizes the operation of an aircraft, such as the owner, lessee, or bailee of an aircraft.

4. "Fatal Injury" means any injury that results in death within thirty (30) days of the accident.

5. "Serious Injury" means any injury that (1) requires hospitalization for more than 48 hours, commencing within 7 days from the date the injury was received; (2) results in a fracture of any bone (except simple fracture of fingers, toes, or nose); (3) causes severe hemorrhages, nerve, muscle, or tendon damage; (4) involves injury to any internal organ; or (5) involves second- or third-degree burns, or any burns affecting more than 5 percent of the body surface.

Type of Fire Extinguishing System: If a fire extinguishing system was used to fight an aircraft fire, specify the type(s) of extinguishing system(s) used. Examples include handheld extinguisher, engine fire bottle, cargo/baggage compartment fire suppression system, or airport emergency ground equipment.

Owner/Operator Information: Enter the owner information as shown on the registration certificate. Commercial operators, enter the operator information, including "doing business as" when applicable, as shown on the operator certificate.

Revenue Sightseeing Flight: Indicate whether the accident aircraft was conducting revenue sightseeing operations under 14 CFR Part 91 at the time of the accident.

Air Medical Flight: Indicate whether the accident flight was being conducted for the purpose of carrying medical personnel, patient(s), or organs.

Public Aircraft: Federal, state or local government flight operations such as official travel, law-enforcement, low-level observation, aerial application, firefighting, search and rescue, biological or geological resource management, or aeronautical research. Indicate whether the flight was conducted by the armed forces, federal, state, or local government.

Purpose of Flight: 14 CFR Parts 91, 103, 133, 136, and 137: Indicate the type of operation that was being conducted at the time of the occurrence using the following definitions:

AERIAL APPLICATION--Operations using an aircraft to perform aerial application or dispersion of any substance. Examples include agricultural, health, forestry, cloud seeding, firefighting, insect control, etc.

AERIAL OBSERVATION--These flights include aerial mapping/photography, patrol, search and rescue, hunting, highway traffic advisory, ranching, surveillance, oil and mineral exploration, criminal pursuit, fish spotting, etc.

AIR DROP--Aerial operations, other than aerial application, that are intended to release items in flight.

AIR RACE/SHOW--Includes any flight operations conducted as part of an organized air race or public demonstration.

BUSINESS--includes all personal flying without a paid professional crew for reasons associated with furthering a business, including transportation to and from business meetings or work. This does not include corporate/executive operations, air taxi, or commuter operations.

EXECUTIVE/CORPORATE--Company flying with a paid, professional crew.

FERRY--Non-revenue flight under a special flight or "ferry" permit. Refer to 14 CFR 21.197 for details of special flight permit issuance.

FLIGHT TEST--Flight for the purpose of investigating the flight characteristics of an aircraft/aircraft component or evaluating an applicant for a pilot certificate or rating.

INSTRUCTIONAL--Flying while under the supervision of a flight instructor or receiving air carrier training. Personal proficiency flight operations and personal flight reviews, as required by federal air regulations, are excluded.

OTHER WORK USE--Miscellaneous flight operations conducted for compensation or hire such as construction work (not 14 CFR Part 135 operation), parachuting, aerial advertising, towing gliders, etc.

PERSONAL--Flying for personal reasons (excludes business transportation) including pleasure or personal transportation. This also includes practice or proficiency flights performed under flight instructor supervision and not part of an approved flight training program.

POSITIONING--Non-revenue flight conducted for the primary purpose of relocating the aircraft. Examples include moving the aircraft to a maintenance facility or to load passengers or cargo etc.

UNKNOWN--Use only if the primary purpose of flight is not known.

Other Aircraft--Collision: For all accidents involving a collision with another aircraft, including parked aircraft, check "Collision with other aircraft" under Basic Information and complete this section indicating details about the OTHER aircraft involved in the collision.

Airport Information: Complete this section if the accident/incident occurred on approach, landing, takeoff, departure, or within 3 statute miles of an airport. Please refer to the FAA Airport/Facility Directory or other official source for airport information.

Airport Identifier: Provide the official 3 or 4 character airport identifier number.

Runway: Indicate the number of the runway used, including L, R, or C if applicable.

Runway/Landing Surface: Indicate the type of intended runway/landing surface (do not indicate surface conditions). If the surface type was mixed, check all that apply.

Condition of Runway/Landing Surface: Indicate the condition of the intended runway/landing surface. If multiple conditions existed at the time of the accident, check all that apply.

Weather Information at the Accident/Incident Site: Indicate the weather conditions reported at the accident/incident site at the time of occurrence. If no weather reporting was available for the accident/incident site, indicate the reported conditions at the nearest reporting site. Specify the weather reporting site identifier, the observation time, and distance from the accident/incident.

Sky/Lowest Cloud Condition: Indicate the height above ground level of the lowest cloud condition present at the time of the accident/incident and whether coverage was reported as few, scattered, broken or overcast. Also indicate the height above ground level and coverage of the lowest cloud ceiling present at the time of the accident/incident (reported as broken or overcast).

NOTAMs (D and FDC), AIRMETs, SIGMETs, PIREPs: Describe all NOTAMs (distant (D) or Flight Data Center (FDC), if known), AIRMETs, SIGMETs, and PIREPs in effect near the accident/incident.

Flight Crewmember Information: Indicate the category that best describes the capacity served by this flight crewmember at the time of the accident. The designators "Flight Crewmember 1" and "Flight Crewmember 2" do not refer to a specific pilot position or responsibility. If more than one pilot is aboard, they may be entered in any order and their capacity entered as appropriate.

Degree of Injury: See Definitions on the top half of Page 1 of the instructions. Minor injury is not defined. If an injury does not meet the criteria for another injury category, select Minor.

Date of Last Flight Review or Equivalent: Enter the date of the most recent flight review, or equivalent, completed by this pilot. Refer to 14 CFR 61.56 for accepted equivalents.

Type Ratings: List all type ratings on the pilot certificate. If the pilot holds no type ratings indicate "none." If the pilot holds a pilot certificate other than student and was flying an aircraft requiring an endorsement, enter the type and date of any logbook endorsement(s) for that aircraft. See 14 CFR 61 for examples of required endorsements.

Student Endorsements: If the pilot holds a student pilot certificate, enter all solo endorsements and dates on the student pilot certificate.

Flight Time: Complete the flight time matrix. Solo flight time should be included as "Pilot-in-Command (PIC)" and all dual flight instruction given should be included as "Time as Instructor."

Additional Flight Crewmembers: Complete this section if there were more than two required flight crewmembers on the aircraft. This also includes a check airman performing official duties but does not include cabin crew. State the capacity served by each included crewmember at the time of the accident.

Passenger(s)/Other Personnel: Enter identification and injury severity information for all passengers, cabin crew, and other personnel involved in the accident. See Page 1 of the instructions for the official definition of injury levels.

Several questions throughout the form allow for multiple responses; when appropriate, choose all responses that apply.

These instructions only pertain to major issue areas covered by NTSB Form 6120.1 Pilot/Operator Aircraft Accident/Incident Report. For additional definitions of questions and responses, please refer to www.nts.gov.

Description of Damage to Aircraft and Other Property *(Use additional sheet if necessary)*

There were 2 taxiway signs that were hit by the aircraft and a few runway / taxiway lights. The aircraft suffered a prop strike, collapsed nose wheel and left wing inboard leading edge. The wing is repairable with a new skin and repairing internal structures. No damage had to the fuselage other than a small dent on the bottom, no damage to the flaps, aileron or tail / stabilator or main landing gear.

NARRATIVE HISTORY OF FLIGHT *(Please type or print in ink)*

Describe what occurred in chronological order, including circumstances leading to and nature of accident/incident. Describe terrain and include wreckage distribution sketch if pertinent. Attach extra sheets if needed. State departure time and location, services obtained, and intended destination. Provide as much detail as possible.

INSTRUCTORS COMMENTS:

On November 27, 2022 Carlos Figueroa and I planned for him to complete his second 3.2 hour solo XC flight to fulfill the requirement of 5 hours solo (37.3 dual given). On the morning of, Carlos and I performed a warm up flight. The flight went great and Carlos showed safety and proficiency in landing on runways reported on the FICON chart as 4/4/4 or better. We stepped inside to perform preflight weather planning. We called a weather briefer together and received a standard weather briefing and confirmed good weather and runway reports for all destinations. The runways were reported as 4/4/4 for PAAQ, 5/5/5 for PAMR, and 4/4/4 for PATK. There were no PIREPS or NOTAMS to indicate differently. All of the runway reports were within company policy which states we will not fly 3/3/3 or below. We also confirmed/compared the weather information received via briefer with Foreflight and other approved sources. Upon receiving the briefing along with other sources we determined there was no significant weather and runways were safe for student solo. We decided to send Carlos on his solo XC. Other resources used were aviation weather cameras and AAWU. I checked his preflight planning i.e Navlogs and performance calculations then I properly endorsed his logbook. He began his solo duties and I logged onto ATC Live to follow my student to Merrill (PAMR). Carlos reached Merrill Tower and correctly identified himself as a solo student and made proper two-way communication. He was cleared to land runway 25. It was shortly after I heard the ELT come across ATC Live.

Upon making contact with Carlos, he immediately told me the runway was not 5/5/5 and control was lost due to the runway being pure ice. Carlos told me he slid off the runway. Earlier in November, prior to the incident, Carlos and I practiced TOL's (takeoffs and landings) at Merrill on a day reported as 5/5/5 with 24 inch berms. The runway was safe and so were Carlos's landings. He demonstrated excellent control of the aircraft. We both expected the runways to be similar to that day.

I state with fact, had the runway been reported as more than 25% ice we would not have sent Carlos on the solo XC in which led him to sliding off the runway.

STUDENT COMMENTS:

On November 27, 2022 I planned with my instructor to complete my second 3.2 hour solo XC flight to fulfill the requirement of 5 hours solo XC needed for a private pilot certificate. The flight would be as follows, PAAQ-PAMR-PATK-PAAQ. I was at 41.6 hours total (37.3 dual given). On the morning of, I performed a warm up flight. The flight felt comfortable on the Palmer runway that was a 4/4/4 or better. I called the weather briefer and received a standard weather briefing and confirmed good weather and runway reports for all destinations. The runways were reported as 4/4/4 for PAAQ, 5/5/5 for PAMR, and 4/4/4 for PATK. There were no PIREPS or NOTAMS to indicate differently. All of the runway reports were within what I was allowed to fly which was better than 3/3/3. We also confirmed and compared the weather information received via briefer with Foreflight and other approved resources. Upon receiving the briefing compared with other sources we determined there was no significant weather and runways were safe. I was given an all clear and felt comfortable with the flight plan. I departed PAAQ. As I flew within 10 miles from Merrill, I contacted Merrill Tower and identified myself as a solo student and made proper two-way communication. I was cleared to land runway 25. At 2.5 miles, I deployed my first set of flaps. Then, I deployed my second set of flaps at 2 miles out. I was indicating proper glideslope and I set my last set of flaps reducing speed further. As I reached the numbers, I felt I could lose a little more speed and held a flare a little further down the runway at about 55 knots but felt like the landing was going to be smooth and as I made contact with the ground it was confirmed. I noticed almost immediately that the ground was not as responsive as Palmer and the aircraft was beginning to point towards the left. I was not comfortable with how the runway felt and decided to add rudder authority back and attempt a go around by adding power and using the remaining 3000 feet. I had no traction and not enough speed to steer the aircraft any further resulting in the aircraft sliding left and off the runway.

After practicing in 4/4/4 runways, I did not think this runway was anywhere close to a 5/5/5. Earlier in November prior to this day I

RECOMMENDATION (How could this accident/incident have been prevented?)

Operator/Owner Safety Recommendation

I have attempted to communicate that the FICON / NOTAM information was totally incorrect on the day of this incident. Runway condition was reported as 5/5/5 25 PCT ICE and 75 PCT FROST. When we attempted to walk on the runway it's all you could do to stand up. When I tried to move my Ford Excursion while on the runway I had to engage the 4 wheel drive to move. Conditions observed at the scene were 100% ice with a light covering of snow/frost. Clearly conditions were not as stated.

The next day 11/28/2022 the runway NOTAM was downgraded to 1/1/1 60 PCT ICE and 30 PCT COMPACTED SN SANDED 75FT WID. I WANT TO NOTE: There was no weather (snow, rain etc) overnight with no change in temperatures. So how did the runway condition change so drastically? There were two Merrill Field employees present (I did not get their names) the gentleman working is the one who conducted the runway assessment, the other gentleman who was called in to assist stated "there is no way this runway is 5/5/5".

Our school has always had a strict safety policy that no flights will be conducted with anything less than 3/3/3 unless an instructor is on board and no flights will be conducted below 2/2/2. When improper runway conditions are reported how can we safely release flights?

To counter the inaccuracies of runway reporting, now we will always send a plane out to determine the actual condition of the runway and surfaces. Then we will brief internal company observed conditions. We have increased training in GO AROUND PROCEDURES and runway centerline decision making skills. We are not stating that the student wasn't at fault, however had the runway been reported correctly, the flight would not have launched in the first place. If the runway was indeed 5/5/5, his slight loss of centerline control would have resulted in a not so perfect landing and nothing more.
