NOTAMs (D and FDC), AIRMETs, SIGMETs, PIREPs in effect at the time of the accident/incident:

None related to runway conditions or other hazardous conditions on the field. No NOTAM restricting 07S/25S to ski aircraft only. There were 1-2 NOTAMs pertaining to instrument procedure at the time from my recollection.

Description of Damage to Aircraft and Other Property *(Use additional sheet if necessary)*

Propeller strike, right wing strut creased, tip of rudder and vertical stabilizer pushed down.

NARRATIVE HISTORY OF FLIGHT *(Please type or print in ink)*

Describe what occurred in chronological order, including circumstances leading to and nature of accident/incident. Describe terrain and include wreckage distribution sketch if pertinent. Attach extra sheets if needed. State departure time and location, services obtained, and intended destination. Provide as much detail as possible.

After digging clams at Poly Creek (west side of Cook Inlet) we departed the ocean bed and circled to gain altitude to safely cross Cook Inlet. I had planned to get lunch and fuel in either Kenai or Soldotna before heading back home to the Palmer, AK area. While gaining safe altitude to cross the inlet I checked NOTAMs for Kenai and saw that their gravel strip was open to ski equipped aircraft only, at which time I checked Soldotna's NOTAMs which did not contain any restrictions or notice of hazardous conditions. I proceeded NE bound over the inlet/Kalgin Island towards PASX, while en route I checked the AWOS and determined that 25S or 25 would be our landing surface. At the time there was no other traffic in the area of PASX making calls/responding on the CTAF, I entered a straight in tight L downwind for 25S at 600'. This was 500' AGL and put me at the lowest legal altitude (which was also a safe altitude for terrain avoidance) to perform a visual inspection of 25S to determine its suitability to land on 35" Bushwheels. On the downwind/inspection pass I could clearly see numerous sets of wheel tracks on 07S/25S and could also make out the plastic bases on ~1/2 of the traffic cones marking the edges of the surface. With this inspection along with no NOTAM closing the surface to wheeled aircraft nor commenting on hazardous conditions I decided to attempt a landing on 25S. The remaining part of the downwind I built some lateral distance from 25S to facilitate a short base leg and allow myself to get stabilized on a final for 25S. This portion of the pattern was unremarkable. On short final I was established on speed/centerline/glide path nicely. I touched down in a tail low wheel landing attitude (so as not to drop the aircraft onto the snow, rather gently touch down with some control surface authority remaining) with some power applied to slow our descent rate at the moment of touch down. Almost immediately after the main wheels had weight on them, the mains broke through a crust of snow and the aircraft decelerated quite rapidly, ultimately slowly nosing over. At that point I finished securing the fuel and electrical power, exited my front door and assisted the evacuation of the left and center seated passengers in the second row. The front seat passenger exited the front right door, and evacuated the passenger in the right seat of the second row.

RECOMMENDATION (How could this accident/incident have been prevented?)**Operator/Owner Safety Recommendation**

I should not have used the absence of a NOTAM commenting on the hazardous condition of 07S/25S to enter into my decision making. Rather I should have evaluated/treated the surface as an off airport site and treated it as such.

While not trying to absolve myself of the responsibility of the flight's safety, there are two factors that I feel are worth consideration. Firstly, the management of PASX had foreknowledge of the hazardous conditions of the surface. I say this because their representative on site after the accident commented on it (the surface not being safe for awhile for wheeled operations) more than once during the recovery operation. Also, even after the accident neither the PASX management nor the FAA closed the surface to wheeled operations. This seems to me to be a blatant disregard to safe operations. Furthermore, during recovery operations 07/25 was closed by NOTAM yet many aircraft continued to use the runway and depart overhead of our operations. The management of PASX nor the FAA, both of whom had representatives on site for the duration, did anything to correct these ongoing unsafe and overtly illegal actions. The representative for Soldotna who was there spent much time engaging in small talk, taking pictures/selfies, and offering commentary on how the surface hadn't been suitable for wheels for some time yet couldn't be bothered to close 07S/25S to wheeled operations or to take steps to stop pilots from using 07/25 which was closed by NOTAM. While perhaps not against any regulation or law, this type of culture isn't safe and should be addressed.

The FAA/NTSB's change in interpretation of 91.119 with regards to an inspection pass not being necessary for landing prevented me from legally inspecting the surface from a lower altitude. Such an inspection would likely have revealed the unsuitability of the surface.
