Description of Damage to Aircraft and Other Property (Use additional sheet if necessary)

Propeller went through both floats, gear collapsed, right wing is compacted to about where the strut is fastened, ~~etc.~~ etc. (insurance company deemed the plane totaled).

NARRATIVE HISTORY OF FLIGHT (Please type or print in ink)

Describe what occurred in chronological order, including circumstances leading to and nature of accident/incident. Describe terrain and include wreckage distribution sketch if pertinent. Attach extra sheets if needed. State departure time and and location, services obtained, and intended destination. Provide as much detail as possible.

Granted special VFR, visibility was great between FAI & 225. It was a little gusty aloft. Blowing 10 from 220. Chena River has a East/West runway and I lined up East. ☺

I rolled into final and popped the first set of flaps. Right over the trees, I got a strong gust, my airspeed dropped off significantly so I added power. When I got down into a roundout I realized I was coming in way to fast. Without considering wind. I pulled the last set of flaps and backed power out, which weathervaned the plane hard to the left. I ran out of rudder and lost directional control so I tried to go around but the power increase aggravated the waterloop and sent me spinning 90 degrees in the direction of the riverbank. I got airborne for a second before it stalled while turning another 90 degrees. The final resting place was 180 degrees from the direction of touchdown after the right wing and right float had knife-edged into the shore.

Turned everything off & evacuated.

RECOMMENDATION (How could this accident/incident have been prevented?)

Operator/Owner Safety Recommendation

- Never land with quartering tailwind
- Use minimal flaps in strong wind
- Revise personal minimums
