Description of Damage to Aircraft and Other Property *(Use additional sheet if necessary)*

Bent struts, bent propeller, 3" diameter plexiglass broken out of front windscreen

NARRATIVE HISTORY OF FLIGHT *(Please type or print in ink)*

Describe what occurred in chronological order, including circumstances leading to and nature of accident/incident. Describe terrain and include wreckage distribution sketch if pertinent. Attach extra sheets if needed. State departure time and location, services obtained, and intended destination. Provide as much detail as possible.

I had departed from PAED around 1500L with the destination being the McArthur River to pick up my husband and daughter, who I had dropped off to salmon fish. I was making my second landing of the day on this particular gravel/sandbar. I had previously walked the landing zone (1200 ft) and then taken off from it. My approach was on-speed and I touched down within 50 ft of my intended landing zone in a 3 point attitude with power at idle. The aircraft was smoothly coasting to a stop. The wheels hit a patch of uneven sand and the aircraft bounced and pitched. I tried to correct it with elevator aft. The aircraft was slow enough that I had no elevator authority. When the aircraft landed from the bounce, the wheels appeared to dig into the sand and the aircraft pitched forward. I reacted with full aft elevator, but the aircraft somersaulted over and landed upside down facing the opposite direction. The engine stopped. I pulled the mixture to idle cutoff, released myself from the seatbelt, and egressed the aircraft.

RECOMMENDATION (How could this accident/incident have been prevented?)

Operator/Owner Safety Recommendation

More experience landing the aircraft at easier off-airport locations might have given me the skills that I need to respond to the unexpected sticking of the wheels in the sand. The FAA off-airport guide states "Be prepared to add power while holding the pitch control all the way back. The airflow from the propeller will assist in blowing the tail down to prevent nosing over." I think this might have helped me, but I had never practiced it before so I was not prepared to execute it. In addition, the tires were inflated for pavement landings rather than soft field landings. I should have adjusted the air pressure prior to off-airport operation.
