NARRATIVE HISTORY OF FLIGHT (Please type or print in ink)

Describe what occurred in chronological order, including circumstances leading to and nature of accident/incident. Describe terrain and include wreckage distribution sketch if pertinent. Attach extra sheets if needed. State time and point of departure, intended destination, and services obtained.

On 07/15/2023 Mike & myself were scheduled for a mountain training day. Ground for that part of training was about 2 hr. We went over Mountain flying, how to read wind, crossing saddles, landing & taking off up hill, and downhill ect. Towards the end of our flight we flew up Friday creek as planned. Practiced our site evaluation (survival pass, Drag Pass, Rock n Roll, ^{Inspection} Validation Pass, land). Survival - look for ways out of the area if something goes bad. Drag - offset to the side of strip, look for govt has, & count runway length 70gs. 70gs = 100ft per sec. Rock n Roll we landed going downhill to put pressure on the surface, at faster speed to test runway & avoid making it a one way strip. Inspection - flew back over to look at tracks & where we actually landed. Landed up hill, everything went perfect. After we shut down & walked around talking about our downhill takeoff. The plan was to track straight on the surface we tested & avoid the tail becoming too high. → Start up everything was going good, we talked through the steps. I asked Mike if he was ready he said yes with excitement. Mike added full power got a little to the left which corrected, after he tried pushing the stick to high I pulled the tail back and said no, "Keep the tail low" again he tried to bring the tail up, I said no. Mike then stomped on the breaks, which caused the airplane to flip over on its back.

RECOMMENDATION (How could this accident/incident have been prevented?)

Operator/Owner Safety Recommendation

As CFI I am pilot in command, so I take ownership in what happened. I believe this situation was avoidable. I've taken other students into Friday creek without an issue. But going forward taking students into a downhill spot like this is too much risk. Everything could be going right, & with the degree of downhill on that strip all it takes is someone locking up the breaks & I won't be able to save it. With that said after thinking about what happened over & over, I could tell Mike was a little nervous. Instead of me worrying about a student's feelings, and wanting them to have the same experience, I should have trusted my gut & read Mike's body language. This whole thing would've been avoided if I just did the takeoff myself & talked him through what I was doing. Then taken him somewhere with less risk. I've talked to Mike several times after this occurred to make sure he knows this is not his fault. In the end I'm just happy we're both OK. I feel this experience will stay with me for a long time. I never want to put someone else, or myself in that situation again.
