**Description of Damage to Aircraft and Other Property** *(Use additional sheet if necessary)*

The aircraft prop was damaged. Right Main gear was damaged. Right Wingtip was damaged. Left horizontal stab has dent.

**NARRATIVE HISTORY OF FLIGHT** *(Please type or print in ink)*

Describe what occurred in chronological order, including circumstances leading to and nature of accident/incident. Describe terrain and include wreckage distribution sketch if pertinent. Attach extra sheets if needed. State departure time and and location, services obtained, and intended destination. Provide as much detail as possible.

I departed PAWS airport at 1100L on 10 Aug 2023. My intentions were to go sight seeing and land at a strip I had been told was in great shape, and had good views. Enroute was smooth and uneventful. At 1210L I was attempting to drag the strip with the intention of eventually landing. The strip is know as "Chaka Strip" it is located at N61.23374 W152.22188, elevation is 2540ft msl. I did a good survey of the strip and had determined it was within the aircraft's ability to use in both directions based on conditions. I was making an initial high speed rolling pass to ensure the surface was firm and suitable for landing. Approximately half way down the 850 foot strip, I initiated a go-around. Within a few seconds I realized that the airplane wasn't producing full power. We were heading towards rising terrain and the airplane was not climbing. I quickly ensured all throttle/prop/condition levers were full forward, and they were all full forward. I glanced down and saw that the airspeed was only indicating about 48 mph and declining, very close to stall speed. I told my passanger, Jon Gunter, to hang on because we were going to make a forced landing. I didn't try to turn as we were seconds from touching down and I knew it would stall and spin if I initiated any turns at that low of an airspeed. The right landing gear caught some brush first and gently spun the airplane about 120 degrees to the right. We came to a quick stop uninjured. The aircraft was in one piece.

I was able to call a friend who immediately flew to pick us up. I marked the airplane with pink surveyors tape in case anyone saw the airplane and reported it before we could get the airplane out. I notified the RCC at JBEAR of the aircraft location and they said they would notify Anchorage ATC as well.

At the scene, the damage to the aircraft appeared minor. Once the aircraft was recovered, I saw additional damage I had not noticed in the field. I notified the NTSB and provided pictures, still uncertain if it was considered reportable. I was advised by Aaron Sauer of the NTSB that it was reportable, and I should fill out this form.

The airplane is currently in Annual and is flown regularly. There are no know maintenance issues with the airplane. I believe I encountered Carb icing which caused the loss of power and lack of ability to climb.

**RECOMMENDATION** (How could this accident/incident have been prevented?)

## Operator/Owner Safety Recommendation

I have never had problems with carb icing on this aircraft. I am aware this particular motor is prone to it. There are large insulated balance tubes installed on this motor that have helped with carb icing. I don't believe there is anything I could have done to prevent this incident.

**MECHANICAL MALFUNCTION/FAILURE** (If more space is needed, continue on separate sheet)Was there Mechanical Malfunction/Failure? ☒ Yes ☐ No

(If yes, list the name of the part, manufacturer, part no., serial no., and describe the failure.)

I believe I encountered carb icing. To my knowledge there were no mechanical problems with this airplane.
