Description of Damage to Aircraft and Other Property *(Use additional sheet if necessary)*

Partial separation of main rotor system and transmission, destruction of main rotor hub and blades, damaged left side skis, damaged left hand side doors, Bent left hand horizontal stabilizer, maged vertical stabilizer.

NARRATIVE HISTORY OF FLIGHT *(Please type or print in ink)*

Describe what occurred in chronological order, including circumstances leading to and nature of accident/incident. Describe terrain and include wreckage distribution sketch if pertinent. Attach extra sheets if needed. State departure time and and location, services obtained, and intended destination. Provide as much detail as possible.

Preflight and initial weather briefings began at approximately 715AKST. Company outlook and pilot review called for VFR conditions for the day. Pilot began aircraft preflight around 0900 and determined the aircraft to be airworthy for the day's tasks. Pilot reviewed weight and balance along with performance calculations prior to departure. Aircraft departed approximately 1040 AKST on a 1 hour sight-seeing tour with intention of completing one off airport landing around 1055AKST. Pilot initiated approach to landing around 1049AKST. During attempt to land pilot lost positive visual reference and thought he was in a controlled hover. Shortly after the helicopter rolled rapidly left and rotor system contacted the terrain. Incident occurred at N61° 15' 11.98" W148° 31' 53.58". Pilot initiated SOS signal using a spider tracks unit to company personnel. Pilot was successfully able to extract all passengers from wreckage out of the right hand doors. pilot grabbed survival gear and fire extinguisher and attempted contact with company personnel again. Company was triggered internal emergency response plan at 1050AKST, which included dispatch of additional company aircraft to scene for assistance, contacting the Joint rescue command center and FSS. Additional company aircraft arrived on scene at 1108 AKST. Two minor injuries were noted from front seat passengers. Additional company aircraft flew them to MatSu Regional hospital for medical attention where they arrived at 1129AKST. Remaining passengers were transported back to departure location and declined medical attention.

RECOMMENDATION (How could this accident/incident have been prevented?)

Operator/Owner Safety Recommendation

Operator found that that the pilot's failure to maintain visual reference and failure to apply the trained techniques to abort landing maneuver led to dynamic rollover. Operator is recommending additional training on white out, flat light, ADM, slope landings, go around procedures.
